Linear Guideways

Product Overview

1. Linear Guideways

A linear guideway facilitates linear movement using ball bearings. Thanks to the use of ball bearings between the rail and the block, it is possible for a linear guideway to achieve extremely precise linear movement. In comparison with a conventional guide rail, the friction coefficient is only one fiftieth. Due to the restricted guidance of the block on the rail the linear guideway can carry loads in vertical and horizontal directions.

1.1 Product Overview

Linear Guideway Series HG and QH

Page 8

- 4-row recirculating ball bearing guide
- 45° contact angle of the ball tracks
- High load capacity in all installation positions
- High rigidity
- Block with SynchMotion™ technology (QH series)

Linear Guideway Series EG and QE

Page 24

- 4-row recirculating ball bearing guide
- 45° contact angle of the ball tracks
- High load capacity in all installation positions
- Low assembly height
- Block with SynchMotion™ technology (QE series)

Linear Guideway Series WE

Page 38

- 4-row recirculating ball bearing guide
- 45° contact angle of the ball tracks
- High torque capacity
- Low assembly height

Linear Guideway Series MG

Page 50

- 2-row recirculating ball bearing guide
- 45° contact angle of the ball tracks
- Compact design
- Small and wide rails

Linear Guideway Series PM

Page 63

- 2-row recirculating ball bearing guide
- 45° contact angle of the ball tracks
- Improved synchronization properties
- Small and wide rails
- Reduced weight

Linear Guideway Series RG and QR

Page 72

- 4-row recirculating roller bearing guide
- 45° contact angle of the ball tracks
- Recirculation roller guide
- Very high load capacity
- Very high rigidity
- Block with SynchMotion™ technology (QR series)

Accessories

Page 86

- Grease nipples
- Lubrication adapters
- Push-in fitting

Linear Guideways

HG/QH series

1.2 Linear Guideway Series HG and QH

1.2.1 Special characteristics of the linear guideway series HG and QH

The HIWIN linear guideways of the HG series with four ball tracks are designed for high loads and rigidities. Due to the 45° arrangement of the ball tracks the HG series can equally take loads from all directions. Low displacement forces and a high efficiency are further features of the HG series. The ball retainers prevent the balls from falling out when the block is pulled off the rail during assembly.

1.2.2 Structure of the HG/QH series

- 4-row recirculation ball bearing guide
- 45° contact angle of ball tracks
- Ball retainers prevent the balls from falling out when the block is removed
- Various sealing variants depending on the field of application
- 6 options for connecting grease nipple or lubrication adapter
- SynchMotion™ technology (QH series)

Fig. Structure of the HG series

1.2.3 Advantages

- Zero play
- Interchangeable
- High accuracy
- High loading capacity in all loading directions
- Low friction losses even with preload thanks to optimized ball tracks and 2-point contact

1.2.4 Article numbers of the HG/QH series

For HG/QH linear guideways, a distinction is made between interchangeable and non-interchangeable models. The dimensions of both models are the same. The main difference is that the block and rail in the interchangeable models can be freely interchanged. Block and rail can be ordered separately and fitted by the customer. Their accuracy extends to class P.

The series QH with SynchMotion™ technology owns all the technical advantages of the standard models of series HG. In addition, because of the controlled movement of the balls in a defined distance to each other, they are characterized by an improved synchronous performance, a higher maximum speed, longer lubrication intervals and a lower noise level. Since the mounting dimensions of the QH blocks are identical to those of the HG blocks, they are also mounted on the HGR standard rail and therefore are very easy to replace

Fig. Structure of the QH series

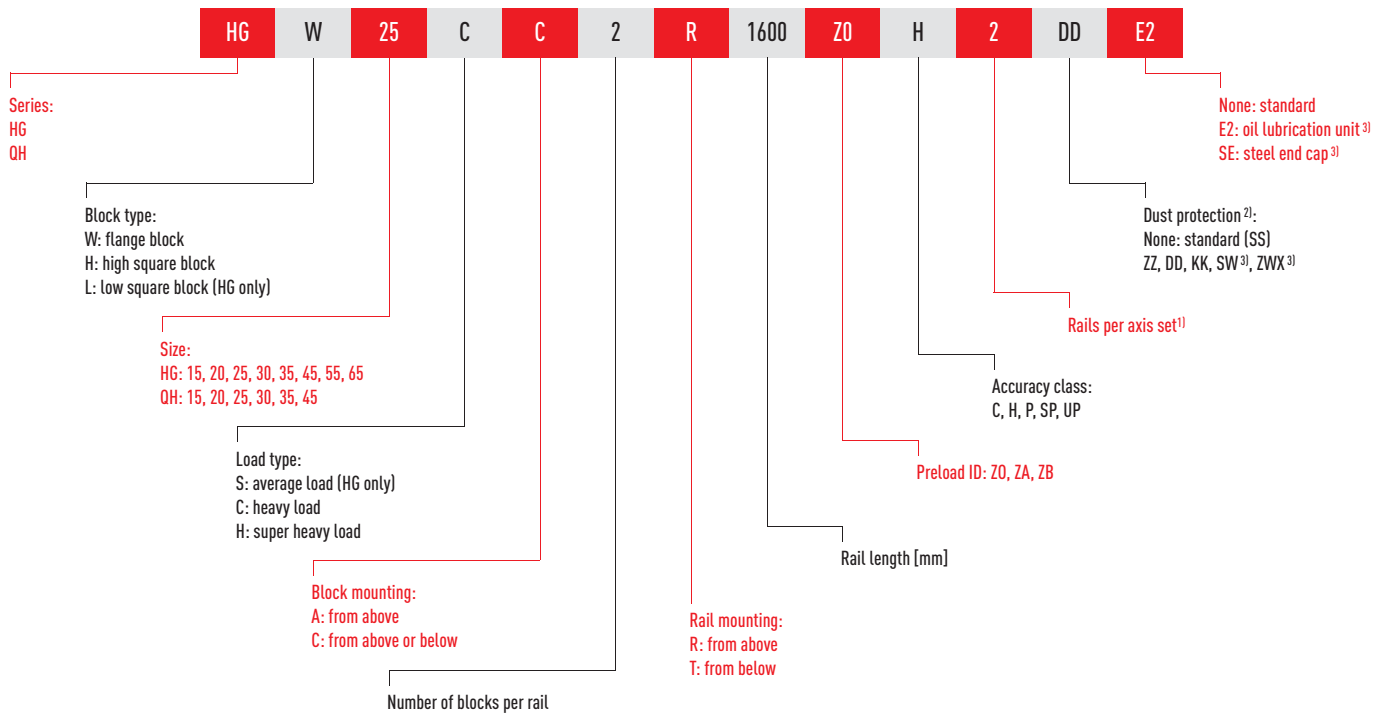

Additional advantages of QH series

- Improved synchronous performance
- Optimized for higher travel speeds
- Extended lubrication intervals
- Less running noise

Given their stringent dimensional accuracy check, the interchangeable models are a good choice for customers who do not use rails in pairs on one axis. Non-interchangeable linear guideways are always supplied preassembled. The article numbers of the series include the dimensions, model, accuracy class, preload etc.

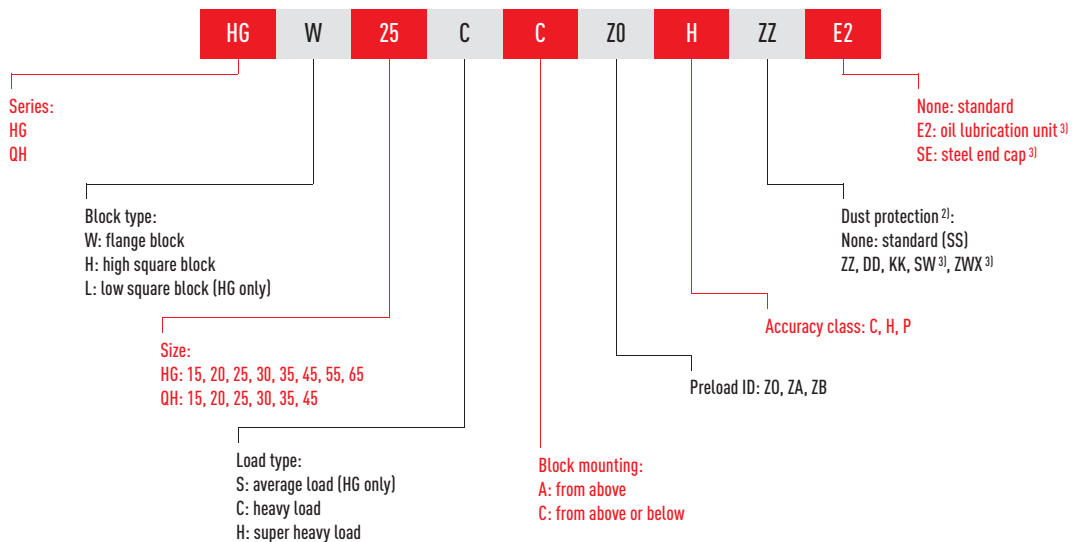

1.2.4.1 Non-interchangeable models (custom-assembled)

○ Article number of the fully assembled linear guideway

1.2.4.2 Interchangeable models

○ Article number of HG/QH block

○ Article number of HG rail

Note:
¹⁾ The figure 2 is also a quantity, i.e. one item of the above-mentioned article consists of a pair of rails. No number is specified for individual rails.
²⁾ You will find an overview of the individual sealing systems on page 89
³⁾ Only available for HG

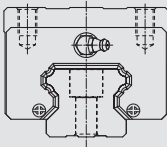

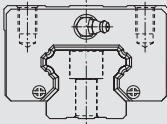

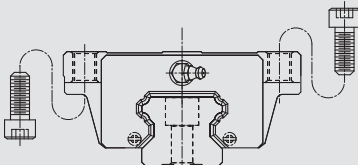

Linear Guideways

HG/QH series

1.2.5 Block types

HIWIN provides square and flange blocks for its linear guideways. Given their low height and larger mounting surface, flange blocks are better suited to large loads.

Table 1.1 Block types

Type	Series/ size	Structure	Height [mm]	Rail length [mm]	Typical application
High square type	HGH-CA HGH-HA		28 – 90	100 – 4.000	<ul style="list-style-type: none"> ○ Machining centers ○ NC lathes ○ Grinding machines ○ Precision milling machines ○ High-performance cutting machines ○ Automation technology ○ Transport technology ○ Measuring technology ○ Machines and equipment requiring high positioning accuracy
Low square type	HGL-CA HGL-HA		24 – 70		
Flange type	HGW-CC HGW-HC		24 – 90		

1.2.6 Preload

1.2.6.1 Definition

Every rail type can be preloaded. Oversized balls are used for this purpose. Normally a linear guideway has negative clearance between track and balls to increase rigidity and precision. The curve shows that the rigidity doubles at higher preload. For rails below the nominal size of Z0, a preload of no more than ZA is recommended to avoid the life-time being shortened as a result of preload.

1.2.6.2 Preload ID

Table 1.2 Preload ID

ID	Preload		Application	Sample applications
Z0	Light preload	$0 - 0,02 C_{dyn}$	Constant load direction, little vibration, lower accuracy needed	Transport technology, automatic packaging machines, X-Y axis in industrial machines, welding machines
ZA	Medium preload	$0,05 - 0,07 C_{dyn}$	High accuracy needed	Machining centres, Z axes for industrial machines, eroding machines, NC lathes, precision X-Y tables, measuring technology
ZB	High preload	above $0,1 C_{dyn}$	High rigidity needed, vibration and impact	Machining centres, grinding machines, NC lathes, horizontal and vertical milling machines, Z axis of machine tools, high-performance cutting machines

Note:

Preload classes for interchangeable guides Z0 and ZA. For non-interchangeable guides Z0, ZA, ZB.

1.2.7 Load ratings and torques

Linear Guideways

HG/QH series

1.2.8 Rigidity

Rigidity depends on preload. The adjacent formula can be used to determine deformation depending on rigidity.

$$\delta = \frac{P}{k}$$

δ : Deformation [μm]

P: Operating load [N]

k: Rigidity [N/ μm]

Table 1.4 Radial rigidity for series HG/QH

HGR55T	53	44,0	M14	24,0	120,0	4000	3840	14	106	15,67
HGR65T	63	53,0	M20	30,0	150,0	4000	3750	15	135	21,73

Note

1. The tolerance for E is +0.5 to -1 mm for standard rails and 0 to -0.3 mm for joints.
2. If the E_{1/2} dimensions are not indicated, the maximum possible number of mounting holes will be determined under consideration of E_{1/2} min.
3. The rails are shortened to the required length. If the E_{1/2} dimensions are not indicated, these will be carried out symmetrically.

1.2.10.3 Calculating the length of rails

HIWIN offers rails in customized lengths. To prevent the risk of the end of the rail becoming unstable, the value E must not exceed half of the distance between the mounting holes (P). At the same time, the value $E_{1/2}$ should be between $E_{1/2}$ min and $E_{1/2}$ max so that the mounting hole does not rupture.

$$L = (n - 1) \cdot P + E_1 + E_2$$

L: Total length of the rail [mm]
 n: Number of mounting holes
 P: Distance between two mounting holes [mm]
 $E_{1/2}$: Distance from the middle of the last mounting hole to the end of the rail [mm]

1.2.10.4 Tightening torques for mounting bolts

Insufficient tightening of the mounting bolts strongly compromises the precision of the linear guideway; the following tightening torques are therefore recommended for the relevant screw sizes.

Table 1.11 Tightening torques of the mounting bolts according to ISO 4762-12.9

Series/size	Screw size	Torque [Nm]	Series/size	Screw size	Torque [Nm]
HG_15	M4 × 16	4	HG_35	M8 × 25	30
HG_20	M5 × 16	9	HG_35	M10	70
HG_25	M6 × 20	13	HG_45	M12 × 35	120

HG_30	M10	70	HG_65	M16 × 50	200

1.2.10.5 Cover caps for mounting holes of rails

The cover caps are used to keep the mounting holes free of chips and dirt. The standard plastic caps are provided with each rail. Optional cover caps must be ordered separately.

Table 1.12 Cover caps for mounting holes of rails

Rail	Screw	Article number			Ø D [mm]	Height H [mm]
		Plastic	Brass	Steel

1.2.11.1 Designation of sealing sets

The sealing sets are always supplied along with the assembly material and include the parts needed in addition to the standard seal.

1.2.12 Friction

The table shows the maximum frictional resistance of the individual end seal. Depending on sealing setup (SS, DD, ZZ, KK), the value may have to be multiplied. The values indicated apply to blocks on uncoated rails. Higher friction forces occur on coated rails.

Table 1.15 Frictional resistance of single-lipped seals

Series/size	Friction force [N]	Series/size	Friction force [N]
HG/QH_15	1,2	HG_45	3,9
HG/QH_20	1,6	QH_45	5,3

HG/QH_35	3,1		

Linear Guideways

HG/QH series

1.2.13 Tolerances depending on accuracy class

The HG and QH series are available in five accuracy classes depending on parallelism between block and rail, height accuracy H and accuracy of width N. The choice of accuracy class is determined by the machine requirements.

1.2.13.1 Parallelism

Parallelism of stop surfaces D and B of block and rail and parallelism of top of block C to mounting surface A of rail. Ideal linear guideway installation is required, as is a measurement in the centre of the block.

Table 1.16 Tolerance of parallelism between block and rail

Rail length [mm]	Accuracy class				
	C	H	P	SP	UP
- 100	12	7	3	2	2
100 - 200	14	9	4	2	2
200 - 300	15	10	5	3	2
300 - 500	17	12	6	3	2
500 - 700	20	13	7	4	2
700 - 900	22	15	8	5	3
900 - 1100	24	16	9	6	3
1100 - 1500	26	18	11	7	4
1500 - 1900	28	20	13	8	4
1900 - 2500	31	22	15	10	5
2500 - 3100	33	25	18	11	6
3100 - 3600	36	27	20	14	7
3600 - 4000	37	28	21	15	7

Unit: μm

1.2.13.2 Accuracy – height and width

Height tolerance H

Permissible absolute dimension variance of height H, measured between centre of screw-on surface C and underside of rail A, with block in any position on the rail.

Height variance of H

Permissible variance of height H between several blocks on a rail, measured in the same rail position.

Width tolerance N

Permissible absolute dimension variance of width N, measured between centre of screw-on surfaces D and B, with block in any position on the rail.

Width variance of N

Permissible variance of width N between several blocks on a rail, measured in the same rail position.

Table 1.17 Height and width tolerances of non-interchangeable types

Series/size	Accuracy class	Height tolerance of H	Width tolerance of N	Height variance of H	Width variance of N
HG_15, 20 QH_15, 20	Normal (C)	± 0,1	± 0,1	0,02	0,02

Unit: mm

Linear Guideways

EG/QE series

1.3 Linear Guideway Series EG and QE

1.3.1 Special characteristics of the linear guideway series EG and QE

The design of the EG series offers a low profile, high load capacity, and high rigidity. It also features an equal load rating in all four directions and self-aligning capability to absorb installation-error, allowing for higher accuracies. Additionally, the lower assembly height and the shorter length makes the EG series more suitable for high-speed automation machines and applications where space is limited. The retainer is designed to hold the balls in the block even when it is removed from the rail.

1.3.2 Structure of the EG/QE series

- 4-row recirculation ball bearing guide
- 45° contact angle of ball tracks
- Ball retainers prevent the balls from falling out when the block is removed
- Various sealing variants depending on the field of application
- 6 options for connecting grease nipple or lubrication adapter
- SynchMotion™ technology (QE series)

Fig. Structure of the EG series

1.3.3 Advantages

- Zero play
- Interchangeable
- High accuracy
- High loading capacity in all loading directions
- Low friction losses even with preload thanks to optimized ball tracks and 2-point contact

1.3.4 Article numbers of the EG/QE series

For EG/QE linear guideways, a distinction is made between interchangeable and non-interchangeable models. The dimensions of both models are the same. The main difference is that the block and rail in the interchangeable models can be freely interchanged. Block and rail can be ordered separately and fitted by the customer. Their accuracy extends to class P.

The series QE with SynchMotion™ technology owns all the technical advantages of the standard models of series EG. In addition, because of the controlled movement of the balls in a defined distance to each other, they are characterized by an improved synchronous performance, a higher maximum speed, longer lubrication intervals and a lower noise level. Since the mounting dimensions of the QE blocks are identical to those of the EG blocks, they are also mounted on the EGR standard rail and therefore are very easy to replace.

Fig. Structure of the QE series

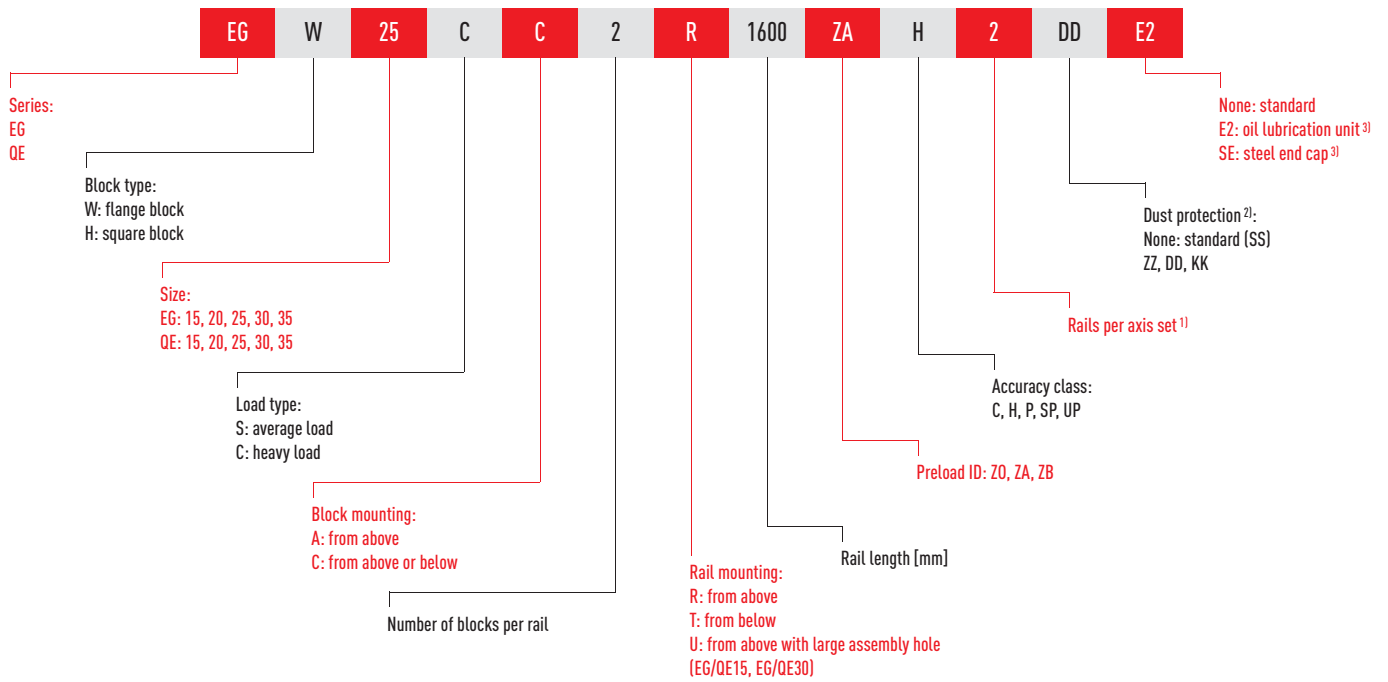

Additional advantages of QE series

- Improved synchronous performance
- Optimized for higher travel speeds
- Extends lubrication intervals
- Less running noise

Given their stringent dimensional accuracy check, the interchangeable modules are a good choice for customers who do not use rails in pairs on one axis. Non-interchangeable linear guideways are always supplied preassembled. The article numbers of the series include the dimensions, model, accuracy class, preload etc.

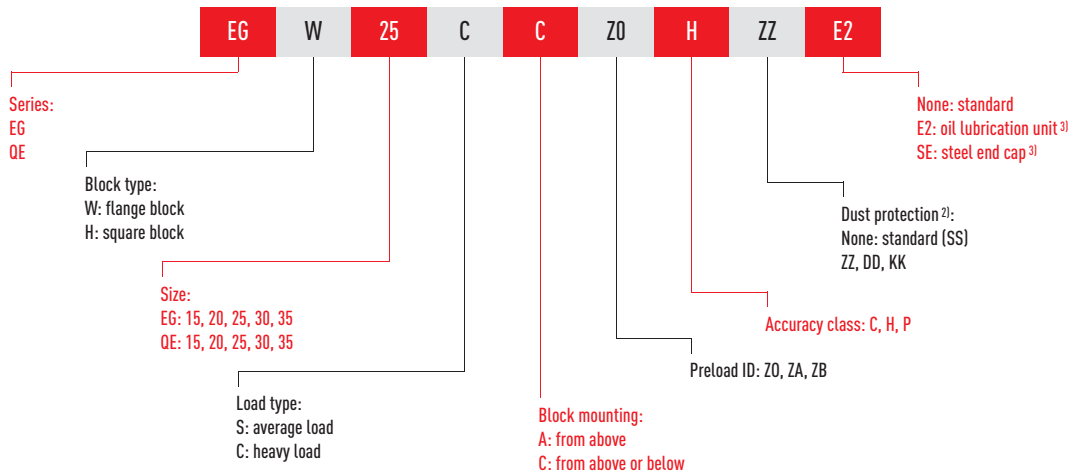

1.3.4.1 Non-interchangeable models (custom-assembled)

○ Article number of the fully assembled linear guideway

1.3.4.2 Interchangeable models

○ Article number of EG/QE block

○ Article number of EG rail

- Note:
- ¹⁾ The figure 2 is also a quantity, i.e. one item of the above-mentioned article consists of a pair of rails. No number is specified for individual rails.
 - ²⁾ You will find an overview of the individual sealing systems on page 89.
 - ³⁾ Only available for EG

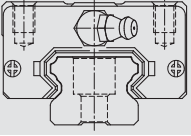

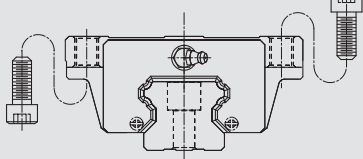

Linear Guideways

EG/QE series

1.3.5 Block types

HIWIN provides square and flange blocks for its linear guideways. Given their low height and larger mounting surface, flange blocks are better suited to large loads.

Table 1.22 Block types

Type	Series/size	Structure	Height [mm]	Rail length [mm]	Typical application
Square type	EGH-SA EGH-CA		24 – 48	100 – 4.000	<ul style="list-style-type: none"> ○ Machining centers ○ NC lathes ○ Grinding machines ○ Precision milling machines ○ High-performance cutting machines ○ Automation technology ○ Transport technology ○ Measuring technology ○ Machines and equipment requiring high positioning accuracy
Flange type	EGW-SC EGW-CC				

1.3.6 Preload

1.3.6.1 Definition

Every rail type can be preloaded. Oversized balls are used for this purpose. Normally a linear guideway has negative clearance between track and balls to increase rigidity and precision. The curve shows that the rigidity doubles at higher preload. For rails below the nominal size of Z0, a preload of no more than ZA is recommended to avoid the lifetime being shortened as a result of preload.

1.3.6.2 Preload ID

Table 1.23 Preload ID

ID	Preload		Application	Sample applications
Z0	Light preload	0 – 0,02 C _{dyn}	Constant load direction, low impact, low accuracy needed	Transport technology, automatic packaging machines, X-Y axis in industrial machines, welding machines
ZA	Medium preload	0,03 – 0,05 C _{dyn}	High accuracy needed	Machining centres, Z axes for industrial machines, eroding machines, NC lathes, precision X-Y tables, measuring technology
ZB	High preload	0,06 – 0,08 C _{dyn}	High rigidity needed, vibration and impact	Machining centres, grinding machines, NC lathes, horizontal and vertical milling machines, Z axis of machine tools, high-performance cutting machines

Note:

Preload classes for interchangeable guides Z0 and ZA. For non-interchangeable guides Z0, ZA, ZB.

1.3.7 Load ratings and torques

Table 1.24 Load ratings and torques for series EG/QE

Series/size	Dynamic load rating C_{dyn} [N]*	Static load rating C_0 [N]	Dynamic moment [Nm]			Static moment [Nm]

EG/QE series

1.3.8 Rigidity

Rigidity depends on preload. The adjacent formula can be used to determine deformation depending on rigidity.

$$\delta = \frac{P}{k}$$

δ: Deformation [μm]

P: Operating load [N]

k: Rigidity [N/μm]

Table 1.25 Radial rigidity for series EG/QE

Load class	Series/ size	Preload

For dimensions of rail, see page 31, for standard and optional lubrication adapter, see page 86.

1.3.10 Dimensions of the EG rail

The EG rails are used for both the EG and QE blocks.

1.3.10.1 Dimensions of EGR_R

Table 1.28 Dimensions of rail EGR_R

Series/ size	Assembly screw for rail [mm]	Dimensions of rail [mm]						Max. length [mm]	Max. length $E_1 = E_2$	$E_{1/2}$ min [mm]	$E_{1/2}$ max [mm]	Weight [kg/m]
		W_R	H_R	D	h	d	P					
EGR15R	M3 × 16	15	12,5	6,0	4,5	3,5	60,0	4000	3900	6	54	1,25
EGR20R	M5 × 16	20	15,5	9,5	8,5	6,0	60,0	4000	3900	7	53	2,08
EGR25R	M6 × 20	23	18,0	11,0	9,0	7,0	60,0	4000	3900	8	52	2,67
EGR30R	M6 × 25	28	23,0	11,0	9,0	7,0	80,0	4000	3920	9	71	4,35
EGR35R	M8 × 25	34	27,5	14,0	12,0	9,0	80,0	4000	3920	9	71	6,14

1.3.10.2 Dimensions of EGR_U (large mounting holes)

Table 1.29 Dimensions of rail EGR_U

Series/ size	Assembly screw for rail [mm]	Dimensions of rail [mm]						Max. length [mm]	Max. length $E_1 = E_2$	$E_{1/2}$ min [mm]	$E_{1/2}$ max [mm]	Weight [kg/m]
		W_R	H_R	D	h	d	P					
EGR15U	M4 × 16	15	12,5	7,5	5,3	4,5	60,0	4000	3900	6	54	1,23
EGR30U	M8 × 25	28	23,0	14,0	12,0	9,0	80,0	4000	3920	9	71	4,23

- Note:
1. The tolerance for E is +0.5 to -1 mm for standard rails and 0 to -0.3 mm for joints.
 2. If the $E_{1/2}$ dimensions are not indicated, the maximum possible number of mounting holes will be determined under consideration of $E_{1/2}$ min.
 3. The rails are shortened to the required length. If the $E_{1/2}$ dimensions are not indicated, these will be carried out symmetrically.

Linear Guideways

EG/QE series

1.3.10.3 Dimensions of EGR_T (rail mounting from below)

Table 1.30 Dimensions of rail EGR_T

Series/ size	Dimensions of rail [mm]					Max. length [mm]	Max. length $E_1 = E_2$	$E_{1/2}$ min [mm]	$E_{1/2}$ max [mm]	Weight [kg/m]
	W_R	H_R	S	h	P					
EGR15T	15	12,5	M5	7,0	60,0	4000	3900	6	54	1,26
EGR20T	20	15,5	M6	9,0	60,0	4000	3900	7	53	2,15
EGR25T	23	18,0	M6	10,0	60,0	4000	3900	8	52	2,79
EGR30T	28	23,0	M8	14,0	80,0	4000	3920	9	71	4,42
EGR35T	34	27,5	M8	17,0	80,0	4000	3920	9	71	6,34

Note

1. The tolerance for E is +0.5 to -1 mm for standard rails and 0 to -0.3 mm for joints.
2. If the $E_{1/2}$ dimensions are not indicated, the maximum possible number of mounting holes will be determined under consideration of $E_{1/2}$ min.
3. The rails are shortened to the required length. If the $E_{1/2}$ dimensions are not indicated, these will be carried out symmetrically.

1.3.10.4 Calculating the length of rails

HIWIN offers rails in customised lengths. To prevent the risk of the end of the rail becoming unstable, the value E must not exceed half of the distance between the mounting holes (P). At the same time, the value $E_{1/2}$ should be between $E_{1/2}$ min and $E_{1/2}$ max so that the mounting hole does not rupture.

$$L = (n - 1) \cdot P + E_1 + E_2$$

- L: Total length of the rail [mm]
n: Number of mounting holes
P: Distance between two mounting holes [mm]
 $E_{1/2}$: Distance from the middle of the last mounting hole to the end of the rail [mm]

1.3.10.5 Tightening torques for mounting bolts

Insufficient tightening of the mounting bolts strongly compromises the precision of the linear guideway; the following tightening torques are therefore recommended for the relevant screw sizes.

Table 1.32 Tightening torques of the mounting bolts according to ISO 4762-12.9

Series/size	Screw size	Torque [Nm]	Series/size	Screw size	Torque [Nm]
EG_15	M3 × 16	2	EG_30	M6 × 25	13
EG_15U	M4 × 16	4	EG_30U	M8 × 25	30
EG_20	M5 × 16	9	EG_35	M8 × 25	30
EG_25	M6 × 20	13			

1.3.10.6 Cover caps for mounting holes of rails

The cover caps are used to keep the mounting holes free of chips and dirt. The standard plastic caps are provided with each rail. Optional cover caps must be ordered separately.

Table 1.33 Cover caps for mounting holes of rails

Rail	Screw	Article number			$\varnothing D$ [mm]	Height H [mm]
		Plastic	Brass	Steel		
EGR15R	M3	C3	C3-M	—	6,0	1,2
EGR20R	M5	C5	C5-M	C5-ST	9,5	2,2
EGR25R	M6	C6	C6-M	C6-ST	11,0	2,5

Unit: mm

1.3.11.1 Designation of sealing sets

The sealing sets are always supplied along with the assembly material and include the parts needed in addition to the standard seal.

1.3.12 Friction

The table shows the maximum frictional resistance of the individual end seal. Depending on sealing setup (SS, ZZ, DD, KK), the value may have to be multiplied. The values indicated apply to blocks on uncoated rails. Higher friction forces occur on coated rails.

Table 1.36 Frictional resistance of single-lipped seals

Series/size	Friction force [N]	Series/size	Friction force [N]
EG_15	1,0	QE_15	1,1
EG_20	1,0	QE_20	1,4
EG_25	1,0	QE_25	1,7
EG_30	1,5	QE_30	2,1
EG_35	2,0	QE_35	2,3

1.3.13 Tolerances depending on accuracy class

The EG and QE series are available in five accuracy classes depending on parallelism between block and rail, height accuracy H and accuracy of width N. The choice of accuracy class is determined by the machine requirements.

1.3.13.1 Parallelism

Parallelism of stop surfaces D and B of block and rail and parallelism of top of block C to mounting surface A of rail. Ideal linear guideway installation is required, as is a measurement in the centre of the block.

Table 1.37 Tolerance of parallelism between block and rail

Rail length [mm]	Accuracy class				
	C	H	P	SP	UP
– 100	12	7	3	2	2
100 – 200	14	9	4	2	2
200 – 300	15	10	5	3	2
300 – 500	17	12	6	3	2
500 – 700	20	13	7	4	2
700 – 900	22	15	8	5	3
900 – 1100	24	16	9	6	3
1100 – 1500	26	18	11	7	4
1500 – 1900	28	20	13	8	4
1900 – 2500	31	22	15	10	5
2500 – 3100	33	25	18	11	6
3100 – 3600	36	27	20	14	7
3600 – 4000	37	28	21	15	7

Unit: μm

Linear Guideways

EG/QE series

1.3.13.2 Accuracy – height and width

Height tolerance H

Permissible absolute dimension variance of height H, measured between centre of screw-on surface C and underside of rail A, with block in any position on the rail.

Height variance of H

Permissible variance of height H between several blocks on a rail, measured in the same rail position.

Width tolerance N

Permissible absolute dimension variance of width N, measured between centre of screw-on surfaces D and B, with block in any position on the rail.

Width variance of N

Permissible variance of width N between several blocks on a rail, measured in the same rail position.

Table 1.38 Height and width tolerances of non-interchangeable types

Series/size	Accuracy class	Height tolerance of H	Width tolerance of N	Height variance of H	Width variance of N

EG/QE_35	210	150	120

Unit: μm

1.3.15 Shoulder heights and fillets

Improper shoulder heights and fillets of mounting surfaces will cause a deviation in accuracy and the interference with the chamfered part of the rail or block. As long as the recommended shoulder heights and fillets are followed, installation inaccuracies should be eliminated.

Table 1.42 Shoulder heights and fillets

Series/size	Max. edge radius r_1	Max. edge radius r_2	Shoulder height of reference edge of rail E_1	Shoulder height of reference edge of block E_2	Clearance under block H_1

EG/QE_20	0,5	0,5	5,0	7,0	6,0
EG/QE_25	1,0	1,0	5,0	7,5	7,0
EG/QE_30	1,0	1,0	7,0	7,0	10,0
EG_35	1,0	1,0	7,5	9,5	11,0
QE_35	1,0	1,5	7,5	9,5	11,0

Unit: mm

Linear Guideways

WE series

1.4 Linear Guideway Series WE

1.4.1 Properties of the linear guideway, series WE

The HIWIN linear guideways of the WE series are based on proven HIWIN technology. Their large rail width and low installation height permit a compact design and high torque loading capacity.

1.4.2 Structure of the WE series

- 4-row recirculation ball bearing guide
- 45° contact angle
- Ball retainers prevent the balls from falling out when the block is removed
- Low installation height
- Wide linear guideway for high torque loading capacity
- Large mounting surface on block

Fig. Structure of the WE series

1.4.3 Advantages

- Compact and low-cost design thanks to high torque loading capacity
- High efficiency thanks to low friction losses

- The block's large mounting surface supports the transfer of higher torques
- The 45° arrangement of ball tracks permits high loading from all directions

- Optimized geometry and high loading capacity thanks to FEM analysis of rail and block

1.4.4 Article numbers of the WE series

For WE linear guideways, a distinction is made between interchangeable and non-interchangeable models. The dimensions of both models are the same. The main difference is that the block and rail in the interchangeable models can be freely interchanged. Block and rail can therefore be ordered separately and fitted by the customer.

Their accuracy extends to class P. Given their stringent dimensional accuracy check, the interchangeable modules are a good choice for customers who do not use rails in pairs on one axis. Non-interchangeable linear guideways are always supplied pre-assembled. The article numbers of the series include the dimensions, model, accuracy class, preload etc.

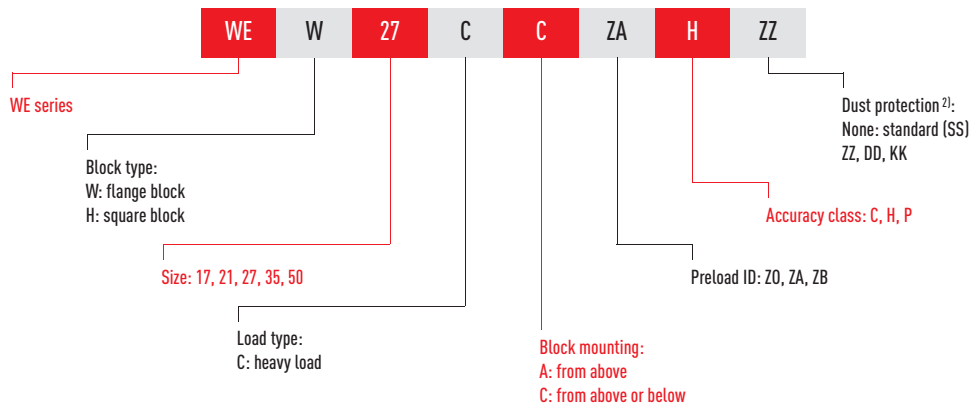

1.4.4.1 Non-interchangeable models (custom-assembled)

- Item number of the fully assembled linear guideway

1.4.4.2 Interchangeable models

- Article number of WE block

- Article number of WE rail

Note
¹⁾ The figure 2 is also a quantity, i.e. one item of the above-mentioned article consists of a pair of rails. No number is specified for individual rails.
²⁾ You will find an overview of the individual sealing systems on page 89.

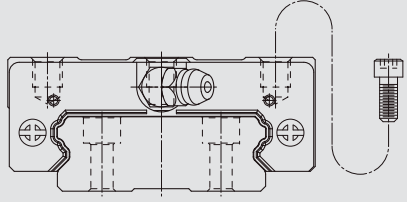

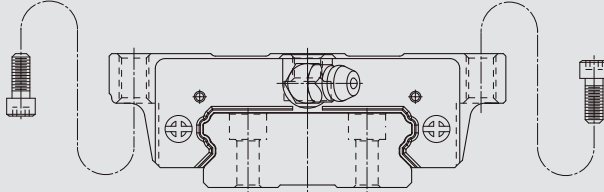

Linear Guideways

WE series

1.4.5 Block types

HIWIN provides square and flange blocks for its linear guideways. Given their low height and larger mounting surface, flange blocks are better suited for large loads.

Table 1.43 Block types

Type	Series Size	Structure	Height [mm]	Rail length [mm]	Typical application
Square type	WEH-CA		17 – 50	100 – 4.000	<ul style="list-style-type: none"> ○ Automation ○ Handling industry ○ Measuring and test technology ○ Semiconductor industry ○ Injection moulding machines ○ Linear axes
Flange type	WEW-CC				

1.4.6 Preload

1.4.6.1 Definition

Every rail type can be preloaded. Oversized balls are used for this purpose. Normally a linear guideway has negative clearance between track and balls to increase rigidity and precision. The curve shows that the rigidity doubles at higher preload.

1.4.6.2 Preload ID

Table 1.44 Preload ID

ID	Preload		Application
Z0	Light preload	0 – 0,02 C_{dyn}	Constant load direction, low impact, low accuracy needed
ZA	Medium preload	0,03 – 0,05 C_{dyn}	High accuracy needed
ZB	High preload	0,06 – 0,08 C_{dyn}	High rigidity needed, vibration and impact

Note:

Preload classes for interchangeable guides Z0 and ZA. For non-interchangeable guides Z0, ZA, ZB.

1.4.7 Load ratings and torques

Table 1.45 Load ratings and torques for series WE

Series/size	Dynamic load rating C_{dyn} [N]*	Static load rating C_0 [N]	Dynamic moment [Nm]			Static moment [Nm]		
			M_x	M_y	M_z	M_{0x}	M_{0y}	M_{0z}

* Dynamic load rating for travel distance of 50 000 m

1.4.8 Rigidity

Rigidity depends on preload. The adjacent formula can be used to determine deformation depending on rigidity.

$$\delta = \frac{P}{k}$$

δ : Deformation [μm]

P: Operating load [N]

k: Rigidity [N/ μm]

Table 1.46 Radial rigidity for series WE

Linear Guideways

WE series

1.4.10 Dimensions of the WE rail

1.4.10.1 Dimensions of WER_R

Table 1.49 Dimensions of rail WER_R

Series/ size	Assembly screw for rail [mm]	Dimensions of the rail [mm]							Max. length [mm]	$E_{1/2}$ min [mm]	$E_{1/2}$ max [mm]	Weight [kg/m]
		W_R	W_B	H_R	D	h	d	P				
WER17R	M4 × 12	33	18	9,3	7,5	5,3	4,5	40,0	4000	6	34	2,20
WER21R	M4 × 12	37	22	11,0	7,5	5,3	4,5	50,0	4000	6	44	3,00
WER27R	M4 × 16	42	24	15,0	7,5	5,3	4,5	60,0	4000	6	54	4,70
WER35R	M6 × 20	69	40	19,0	11,0	9,0	7,0	80,0	4000	8	72	9,70
WER50R	M8 × 25	90	60	24,0	14,0	12,0	9,0	80,0	4000	9	71	14,60

- Note
1. The tolerance for E is +0.5 to -1 mm for standard rails and 0 to -0.3 mm for joints.
 2. If the $E_{1/2}$ dimensions are not indicated, the maximum possible number of mounting holes will be determined under consideration of $E_{1/2}$ min.
 3. The rails are shortened to the required length. If the $E_{1/2}$ dimensions are not indicated, these will be carried out symmetrically.

1.4.10.2 Calculating the length of rails

HIWIN offers rails in customized lengths. To prevent the risk of the end of the rail becoming unstable, the value E must not exceed half of the distance between the mounting holes (P). At the same time, the value $E_{1/2}$ should be between $E_{1/2}$ min and $E_{1/2}$ max so that the mounting hole does not rupture.

- L : Total length of the rail [mm]
 n : Number of mounting holes
 P : Distance between two mounting holes [mm]
 E : Distance from the middle of the last mounting hole to the end of the rail [mm]

1.4.10.3 Tightening torques for mounting bolts

Insufficient tightening of the mounting bolts compromises the function and precision of the linear guideways. The following tightening torques are recommended for the screw sizes.

Table 1.51 Tightening torques of the mounting bolts according to ISO 4762-12.9

Series/size	Screw size	Torque [Nm]	Series/size	Screw size	Torque [Nm]
WE_17	M4	4	WE_35	M6	13
WE_21	M4	4	WE_50	M8	30
WE_27	M4	4			

1.4.10.4 Cover caps for mounting holes of rails

The cover caps are used to keep the mounting holes free of chips and dirt. The standard plastic caps are provided with each rail. Optional cover caps must be ordered separately.

Table 1.52 Cover caps for mounting holes of rails

Rail	Screw	Article number			Ø D [mm]	Height H [mm]
		Plastic	Brass	Steel		
WER17R	M4	C4	C4-M	—	7,5	1,1

1.4.14 Permissible mounting surface tolerances

Once the requirements relating to the accuracy of the mounting surfaces are met, the good accuracy, rigidity and lifetime of the WE series linear guideways are achieved.

Parallelism of the reference surface (P)

Table 1.59 Maximum tolerance for parallelism (P)

Series/size	Preload class		
	Z0	ZA	ZB
WE_17	20	15	9
WE_21	25	18	9
WE_27	25	20	13
WE_35	30	22	20

WE_50	170	110	90

Unit: μm

1.4.15 Shoulder heights and fillets

Imprecise shoulder heights and fillets of mounting surfaces compromise precision and may lead to conflicts with the block or rail profiles. The following shoulder heights and edge profiles must be observed in order to avoid assembly problems.

Table 1.61 Shoulder heights and fillets

Series/size	Max. edge radius r_1	Max. edge radius r_2	Shoulder height of reference edge of rail E_1	Shoulder height of reference edge of block E_2	Clearance under block H_1

WE_50	0,8	0,8	6,0	10,0	7,5

Unit: mm

Linear Guideways

MG series

1.5 Linear Guideway Series MG

1.5.1 Properties of the linear guideway, series MGN

The HIWIN linear guideway of the MGN series is based on proven HIWIN technology. The Gothic arch contact design absorbs loads in all directions and is particularly rigid and precise. Given its compact and lightweight design, it is particularly suited to use in small devices.

1.5.2 Structure of the MGN series

Fig. Structure of the MGN series

- 2-row recirculation ball bearing guide
- Gothic arch contact design
- Stainless steel block
- Rails made from standard or stainless steel
- Compact and lightweight design
- Steel balls are secured in the block by retaining wire
- Grease nipple available for MGN15
- End seal
- Bottom seal (optional for sizes 12 and 15)
- Interchangeable models are available in defined accuracy classes

1.5.3 Properties of the linear guideway, series MGW

The HIWIN linear guideway of the MGW series is based on proven HIWIN technology. The Gothic arch contact design absorbs loads in all directions and is particularly rigid and precise. The MGW series has a wider rail than the MGN series so can absorb considerably higher load torques.

1.5.4 Structure of the MGW series

Fig. Structure of the MGW series

- 2-row recirculation ball bearing guide
- Gothic arch contact design
- Stainless steel block
- Rails made from standard or stainless steel
- Compact and lightweight design
- Steel balls are secured in the block by retaining wire
- Grease nipple available for MGW15
- End seal
- Bottom seal (optional for sizes 12 and 15)
- Interchangeable models are available in defined accuracy classes

1.5.5 Applications of the MG series

The MGN and MGW series can be used in many sectors, e.g. in the semiconductor industry, PCB population, medical technology, robot applications, measurement devices, office automation and other sectors needing miniature guides.

Linear Guideways

MG series

1.5.6 Article numbers of the MG series

For MGN and MGW linear guideways, a distinction is made between interchangeable and non-interchangeable models. The dimensions of both models are the same. The main difference is that the block and rail in the interchangeable models can be freely interchanged. Block and rail can therefore be ordered separately and fitted by the customer.

Given their stringent dimensional accuracy check, the interchangeable modules are a good choice for customers who do not use rails in pairs on one axis. The article numbers include the dimensions, model, accuracy class, preload etc.

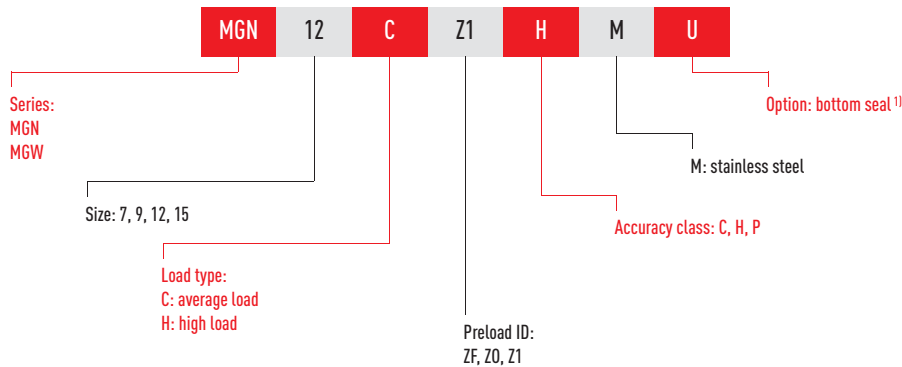

1.5.6.1 Non-interchangeable models (custom-assembled)

- Article number of the fully assembled linear guideway

1.5.6.2 Interchangeable models

- Article number of MG block

- Article number of MG rail

Note

¹⁾ Bottom seal is available for MGN and MGW series in sizes 12 and 15.

²⁾ The figure 2 is also a quantity, i.e. one item of the above-mentioned article consists of a pair of rails. No number is specified for individual rails.

³⁾ Only available for MGN 9, 12, 15 and MGW 12, 15.

1.5.7 Preload

The MGN/MGW series offers three preload classes for various applications.

Table 1.62 Preload ID

ID	Preload	Accuracy class
ZF	Slight play: 4 – 10 µm	C, H
Z0	Zero-play, very slight preload	C – P
Z1	slight preload: 0 – 0.02 C _{dyn}	C – P

1.5.8 Load ratings and torques

Table 1.63 Load ratings and torques for MG series

Series/size	Dynamic load rating C _{dyn} [N]*	Static load rating C ₀ [N]	Dynamic moment [Nm]			Static moment [Nm]		
			M _x	M _y	M _z	M _{0x}	M _{0y}	M _{0z}

Linear Guideways

MG series

1.5.9 Rigidity

Rigidity depends on preload. The adjacent formula can be used to determine deformation depending on rigidity.

$$\delta = \frac{P}{k}$$

δ : Deformation [μm]

P: Operating load [N]

k: Rigidity [N/ μm]

Table 1.64 Radial rigidity for series MGN

Load Class	Series/ size	Preload	
		Z0	Z1

MGWR15R	M4 × 10	42	9,5	23	8,0	4,5	4,5	40	2000	1960	8	32	2,86

- Note:
1. The tolerance for E is +0.5 to -1.0 mm for standard rails and 0 to -0.3 mm for joints.
 2. If the $E_{1/2}$ dimensions are not indicated, the maximum possible number of mounting holes will be determined under consideration of $E_{1/2}$ min.

Linear Guideways

MG series

1.5.11.3 Calculating the length of rails

HIWIN offers rails in customized lengths. To prevent the risk of the end of the rail becoming unstable, the value E must not exceed half of the distance between the mounting holes (P). At the same time, the value $E_{1/2}$ should be between $E_{1/2}$ min and $E_{1/2}$ max so that the mounting hole does not rupture.

$$L = (n - 1) \cdot P + E_1 + E_2$$

- L: Total length of the rail [mm]
- n: Number of mounting holes
- P: Distance between two mounting holes [mm]
- $E_{1/2}$: Distance from the middle of the last mounting hole to the end of the rail [mm]

1.5.11.4 Tightening torques for mounting bolts

Insufficient tightening of the mounting bolts strongly compromises the precision of the linear guideway; the following tightening torques are therefore recommended for the relevant screw sizes.

Table 1.71 Tightening torques of the mounting bolts according to ISO 4762-12.9

Series/size	Screw size	Torque [Nm]	Series/size	Screw size	Torque [Nm]
MGN07	M2 × 6	0,6	MGW07	M3 × 6	2
MGN09	M3 × 8	2	MGW09	M3 × 8	2
MGN12	M3 × 8	2	MGW12	M4 × 8	4
MGN15	M3 × 10	2	MGW15	M4 × 10	4

1.5.11.5 Cover caps for mounting holes of rails

The cover caps are used to keep the mounting holes free of chips and dirt. The standard plastic caps are provided with each rail.

Table 1.72 Cover caps for mounting holes of rails

Rail	Screw	Article number		Ø D [mm]	Height H [mm]
		Plastic	Brass		
MGNR09R	M3	C3 ¹⁾	C3 ¹⁾	6,0	1,1
MGNR12R	M3	C3	C3	6,0	1,1
MGNR15R	M3	C3	C3	6,0	1,1
MGWR09R	M3	C3	C3	6,0	1,1
MGWR12R	M4	C4A	—	8,0	1,1
MGWR15R	M4	C4A	—	8,0	1,1

¹⁾ Standard: without cover caps, state in order if required. Only possible with cylinder head screws with a low head according to DIN 7984.

1.5.12 Dust protection

The blocks of the MG series are equipped on both sides with an end seal to protect against dirt as standard. Additional seals can be fitted underneath on the side of the block. Bottom seals can be ordered using the “+U” identifier in the article number. They are available as options for sizes 12 and 15. They cannot be fitted for sizes 7 and 9 due to the limited installation space H_1 . When fitting a bottom seal, the side mounting surface of the rail must not exceed H_1 .

Table 1.74 Installation space H_1

Series/size	Bottom seal	H_1	Series/size	Bottom seal	H_1
MGN07	—	—	MGW07	—	—
MGN09	—	—	MGW09	—	—
MGN12	•	2,0	MGW12	•	2,6
MGN15	•	3,0	MGW15	•	2,6

1.5.13 Friction

The table shows the maximum frictional resistance of the seals of a block. The values indicated apply to blocks on uncoated rails. Higher friction forces occur on coated rails.

Table 1.76 Frictional resistance for standard block

Series/size	Friction force [N]	Series/size	Friction force [N]
MGN07	0,1	MGW07	0,2
MGN09	0,1	MGW09	0,2
MGN12	0,2	MGW12	0,3
MGN15	0,2	MGW15	0,3

1.5.14 Tolerances depending on accuracy class

The MG series are available in three accuracy classes depending on parallelism between block and rail, height accuracy H and accuracy of width N . The choice of accuracy class is determined by the machine requirements.

Linear Guideways

MG series

1.5.14.1 Parallelism

Parallelism of stop surfaces D and B of block and rail and parallelism of top of block C to mounting surface A of rail. Ideal linear guideway installation is required, as is a measurement in the centre of the block.

Table 1.78 Tolerance of parallelism between block and rail

Rail length [mm]	Accuracy class			Rail length [mm]	Accuracy class		
	C	H	P		C	H	P
- 50	12	6	2	315 – 400	18	11	6
50 – 80	13	7	3	400 – 500	19	12	6
80 – 125	14	8	3,5	500 – 630	20	13	7
125 – 200	15	9	4	630 – 800	22	14	8
200 – 250	16	10	5	800 – 1000	23	16	9
250 – 315	17	11	5	1000 – 1200	25	18	11

Unit: μm

1.5.14.2 Accuracy – height and width

Height tolerance H

Permissible absolute dimension variance of height H, measured between centre of screw-on surface C and underside of rail A, with block in any position on the rail.

Width tolerance N

Permissible absolute dimension variance of width N, measured between centre of screw-on surfaces D and B, with block in any position on the rail.

Height variance of H

Permissible variance of height H between several blocks on a rail, measured in the same rail position.

Width variance of N

Permissible variance of width N between several blocks on a rail, measured in the same rail position.

Table 1.79 Height and width tolerances of non-interchangeable models

Series/size	Accuracy class	Height tolerance of H	Width tolerance of N	Height variance of H	Width variance of N
MG_07 – MG_15	Normal (C)	$\pm 0,04$	$\pm 0,04$	0,03	0,03
	High (H)	$\pm 0,02$	$\pm 0,025$	0,015	0,02
	Precision (P)	$\pm 0,01$	$\pm 0,015$	0,007	0,01

Unit: mm

Table 1.80 Height and width tolerances of interchangeable types

Series/size	Accuracy class	Height tolerance of H	Width tolerance of N	Height variance of H	Width variance of N	Height variance of H ¹⁾
MG_07 – MG_15	Normal (N)	$\pm 0,04$	$\pm 0,04$	0,03	0,03	0,07
	High (H)	$\pm 0,02$	$\pm 0,025$	0,015	0,02	0,04
	Precision (P)	$\pm 0,01$	$\pm 0,015$	0,007	0,01	0,02

Unit: mm

¹⁾ Permissible deviation of height H between several blocks on a pair of rails

1.5.15 The accuracy tolerance of rail-mounting surface

Once the demands on the accuracy of the mounting surfaces are met, the high accuracy, rigidity and durability of the linear guideways of the MG series are reached.

Parallelism tolerance of reference surface (P)

Table 1.81 Maximum tolerances for the parallel alignment (P)

Series/size	Preload class		
	ZF	Z0	Z1
MG_07	3	3	3
MG_09	4	4	3
MG_12	9	9	5

MGW15	0,4	0,8	3	5

Unit: mm

1.6 Linear Guideway Series PM

1.6.1 Properties of the linear guideway, series PMN

The HIWIN linear guideway of the PMN series is based on the proven MGN series. Thanks to the optimised ball return in the plastic duct, the synchronous performance and quiet running are improved and the weight is reduced by around 20 %. The Gothic race profile absorbs loads in all directions and is particularly rigid and precise. Given its compact and lightweight design, it is particularly suited to use in small devices.

1.6.2 Structure of the PMN series

Fig. Structure of the PMN series

- 2-row recirculation ball bearing guide
- Gothic arch contact design
- Stainless steel block and balls
- Rails made from standard or stainless steel
- Compact and lightweight design
- Balls are secured in the block by retaining wire
- End seal
- Interchangeable models are available in defined accuracy classes
- Optimized ball deflection
- Improved synchronous performance
- Reduced weight

1.6.3 Applications of the PM series

The PM series was developed for use in restricted spaces, e.g. in the semiconductor industry, PCB population, medical technology, robot applications, measurement devices, office automation and other sectors needing miniature guides.

Linear Guideways

PM series

1.6.4 Article numbers of the PM series

For PM linear guideways, a distinction is made between interchangeable and non-interchangeable models. The dimensions of both models are the same. The main difference is that the block and rail in the interchangeable models can be freely interchanged. Block and rail can therefore be ordered separately and fitted by the customer.

Given their stringent dimensional accuracy check, the interchangeable modules are a good choice for customers who do not use rails in pairs on one axis. The article numbers include the dimensions, model, accuracy class, preload etc.

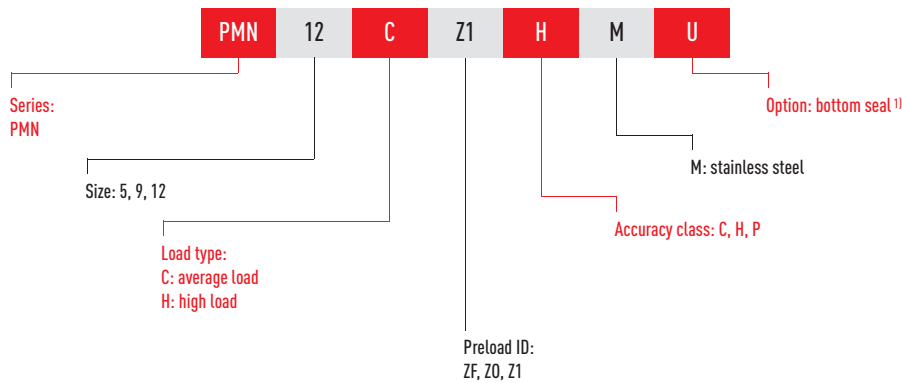

1.6.4.1 Non-interchangeable models (custom-assembled)

- Article number of the fully assembled linear guideway

1.6.4.2 Interchangeable models

- Article number of PM block

- Article number of PM rail

Note:
¹⁾ Bottom seal is available in sizes 9 and 12.
²⁾ The figure 2 is also a quantity, i.e. one item of the above-mentioned article consists of a pair of rails. No number is specified for individual rails.

1.6.5 Preload

The PM series offers three preload classes for various applications.

Table 1.85 Preload ID

ID	Preload	Accuracy class
ZF	Slight play: 4 – 10 µm	C, H
Z0	Zero-play, very slight preload	C – P
Z1	Slight preload: 0 – 0,02 C _{dyn}	C – P

1.6.6 Load ratings and torques

Table 1.86 Load ratings and torques for PM series

Series/size	Dynamic load rating C _{dyn} [N]*	Static load rating C ₀ [N]	Dynamic moment [Nm]			Static moment [Nm]		
			M _x	M _y	M _z	M _{0x}	M _{0y}	M _{0z}

1.6.8 Dimensions of the PM rail

1.6.8.1 Dimensions of PMN_R

Table 1.88 Dimensions of rail PMN_R

Series/ size	Assembly screw for rail [mm]	Dimensions of rail [mm]						Max. length [mm]	Max. length $E_1 = E_2$	$E_{1/2}$ min [mm]	$E_{1/2}$ max [mm]	Weight [kg/m]
		W_R	H_R	D	h	d	P					
PMNR05R	M2 × 6	5	3,6	3,6	0,8	2,4	15,0	250	225	4	11	0,15
PMNR09R	M3 × 8	9	6,5	6,0	3,5	3,5	20,0	1200	1180	5	15	0,38
PMNR12R	M3 × 8	12	8,0	6,0	4,5	3,5	25,0	2000	1975	5	20	0,65

- Note:
1. The tolerance for E is +0.5 to -1.0 mm for standard rails and 0 to -0.3 mm for joints.
 2. If the $E_{1/2}$ dimensions are not indicated, the maximum possible number of mounting holes will be determined under consideration of $E_{1/2}$ min.

1.6.8.2 Calculating the length of rails

HIWIN offers rails in customised lengths. To prevent the risk of the end of the rail becoming unstable, the value E must not exceed half of the distance between the mounting holes (P). At the same time, the value $E_{1/2}$ should be between $E_{1/2}$ min and $E_{1/2}$ max so that the mounting hole does not rupture.

$$L = (n - 1) \cdot P + E_1 + E_2$$

L : Total length of the rail [mm]
 n : Number of mounting holes
 P : Distance between two mounting holes [mm]
 $E_{1/2}$: Distance from the middle of the last mounting hole to the end of the rail [mm]

1.6.8.3 Tightening torques for mounting bolts

Insufficient tightening of the mounting bolts strongly compromises the precision of the linear guideway; the following tightening torques are therefore recommended for the relevant screw sizes.

Table 1.90 Tightening torques of the mounting bolts according to ISO 4762-12.9

Series/size	Screw size	Torque [Nm]	Series/size	Screw size	Torque [Nm]
PMN05	M2 × 6	0,6	PMN12	M3 × 8	2,0
PMN09	M3 × 8	2,0			

Linear Guideways

PM series

1.6.8.4 Cover caps for mounting holes of rails

The cover caps are used to keep the mounting holes free of chips and dirt. The standard plastic caps are provided with each rail.

Table 1.91 Cover caps for mounting holes of rails

Rail	Screw	Article number		Ø D [mm]	Height H [mm]
		Plastic	Brass		
PMNR05R	—	—	—	—	—
PMNR09R	M3	C3 ¹⁾	C3 ¹⁾	6,0	1,1
PMNR12R	M3	C3	C3	6,0	1,1

¹⁾ Standard without cover caps, state in order if required. Only possible with cylinder head screws with a low head according to DIN 7984.

1.6.9 Dust protection

The blocks of the PM series are equipped on both sides with an end seal to protect against dirt as standard. Additional seals can be fitted underneath on the side of the block. Bottom seals can be ordered using the “+U” identifier in the article number. They are available as options for sizes 9 and 12. They cannot be fitted for size 5 due to the limited installation space H_1 . When fitting a bottom seal, the side mounting surface of the rail must not exceed H_1 .

Table 1.93 Installation space H_1

Series/size	Bottom seal	H_1	Series/size	Bottom seal	H_1
PMN05	—	—	PMN12	•	2,0
PMN09	•	1,2			

1.6.10 Friction

The table shows the maximum frictional resistance of the seals of a block. The values indicated apply to blocks on uncoated rails. Higher friction forces occur on coated rails.

Table 1.95 Frictional resistance for standard block

Series/size	Friction force [N]	Series/size	Friction force [N]
PMN05	0,1	PMN12	0,2
PMN09	0,1		

1.6.11 Tolerances depending on accuracy class

The PM series are available in three accuracy classes depending on parallelism between block and rail, height accuracy H and accuracy of width N. The choice of accuracy class is determined by the machine requirements.

1.6.11.1 Parallelism

Parallelism of stop surfaces D and B of block and rail and parallelism of top of block C to mounting surface A of rail. Ideal linear guideway installation is required, as is a measurement in the centre of the block.

Table 1.97 Tolerance of parallelism between block and rail

Rail length [mm]	Accuracy class			Rail length [mm]	Accuracy class		
	C	H	P		C	H	P
- 50	12	6	2	1000 – 1200	25	18	11
50 – 80	13	7	3	1200 – 1300	25	18	11
80 – 125	14	8	3,5	1300 – 1400	26	19	12

800 – 1000	23	16	9				

Unit: μm

Linear Guideways

PM series

1.6.11.2 Accuracy – height and width

Height tolerance H

Permissible absolute dimension variance of height H, measured between centre of the screw-on surface C and underside of rail A, with block in any position on the rail.

Width tolerance N

Permissible absolute dimension variance of width N, measured between centre of the screw-on surfaces D and B, with block in any position on the rail.

Height variance of H

Permissible variance of height H between several blocks on a rail, measured in the same rail position.

Width variance of N

Permissible variance of width N between several blocks on a rail, measured in the same rail position.

Table 1.98 Height and width tolerances of non-interchangeable models

Series/size	Accuracy class	Height tolerance of H	Width tolerance of N	Height variance of H	Width variance of N
PMN05 – PMN12	Normal (C)	± 0,04	± 0,04	0,03	0,03
	High (H)	± 0,02	± 0,025	0,015	0,02
	Precision (P)	± 0,01	± 0,015	0,007	0,01

Unit: mm

Table 1.99 Height and width tolerances of interchangeable types

Series/size	Accuracy class	Height tolerance of H	Width tolerance of N	Height variance of H	Width variance of N	Height variance of H ¹⁾
PMN05 – PMN12	Normal (N)	± 0,04	± 0,04	0,03	0,03	0,07
	High (H)	± 0,02	± 0,025	0,015	0,02	0,04
	Precision (P)	± 0,01	± 0,015	0,007	0,01	0,02

Unit: mm

¹⁾ Permissible deviation of height H between several blocks on a pair of rails

1.6.12 Permissible mounting surface tolerances

Once the requirements relating to the accuracy of the mounting surfaces are met, the good accuracy, rigidity and lifetime of the PM series linear guideways are achieved.

Parallelism of the reference surface (P)

Table 1.100 Maximum tolerance for parallelism (P)

Series/size	Preload class		
	ZF	Z0	Z1
PM_05	2	2	2
PM_09	4	4	3
PM_12	9	9	5

Unit: µm

Table 1.101 Maximum tolerance for height of reference surface (S₁)

Series/size	Preload class		
	ZF	Z0	Z1
PM_05	20	20	2
PM_09	35	35	6
PM_12	50	50	12

Unit: μm

Table 1.102 Requirements for the mounting surface

Series/size	Required evenness of the mounting surface
PM_05	0,015/200
PM_09	0,035/200
PM_12	0,050/200

Unit: mm

Note: The values in the table are applicable to the preload classes ZF and Z0. For Z1 or if more than one rail is to be mounted on the same surface, the table values must be at least halved.

1.6.13 Shoulder heights and fillets

Imprecise shoulder heights and fillets of mounting surfaces compromise precision and may lead to conflicts with the block or rail profiles. The following shoulder heights and edge profiles must be observed in order to avoid assembly problems.

Table 1.103 Shoulder heights and fillets

Series/size	Max. edge radius r_1	Max. edge radius r_2	Shoulder height of H_1	Shoulder height of H_2
PMN05	0,1	0,2	1,2	2
PMN09	0,2	0,3	1,7	3
PMN12	0,3	0,4	1,7	4

Unit: mm

Linear Guideways

RG/QR series

1.7 Linear Guideway Series RG and QR

1.7.1 Properties of the linear guideways, series RG and QR

The HIWIN linear guideways of the RG series use rollers rather than balls as rolling elements. The RG series provides extremely good rigidity and very good loading capacity. It is designed with a 45° contact angle. Its linear contact surface greatly reduces deformation from the loading produced and therefore ensures very good rigidity and loading capacity in all 4 loading directions. The linear guides of the RG series are therefore ideal for use in high-precision manufacturing.

1.7.2 Structure of the RG/QR series

- 4-row recirculation roller bearing guide
- 45° contact angle
- Ball retainers prevent the rollers from falling out when the block is removed
- Various sealing variants depending on the field of application
- 6 options for connecting grease nipple and lubrication adapter
- SynchMotion™ technology (QR series)

Fig. Structure of the RG series

1.7.3 Advantages

- Zero play
- Interchangeable
- Very high load ratings
- Very high rigidity
- Low displacement forces even with high preload

1.7.4 Article numbers of the RG/QR series

For RG/QR linear guideways, a distinction is made between interchangeable and non-interchangeable models. The dimensions of both models are the same. The main difference is that the block and rail in the interchangeable models can be freely interchanged. The article numbers of the series include the dimensions, model, accuracy class, preload etc.

The models of the QR series with SynchMotion™ technology offer all the positive properties of the standard series RG. Controlled movement of the rollers at a defined distance also results in improved synchronous performance, higher reliable travel speeds, extended lubrication intervals and less running noise. Since the installation dimensions of the QR blocks are identical to those of the RG blocks, they are also fitted on the RGR standard rail and can therefore be interchanged with ease.

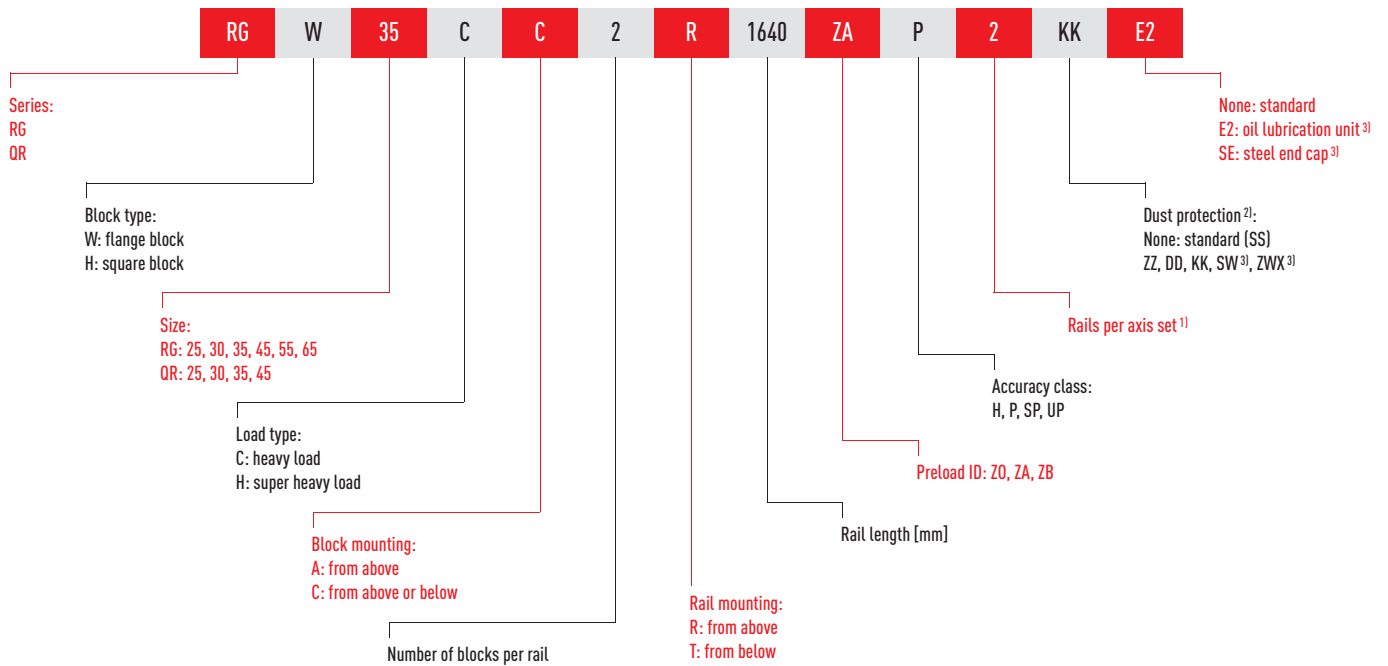

Fig. Structure of the QR series

Additional advantages of QR series

- Improved synchronous performance
- Optimized for higher travel speeds
- Extended lubrication intervals
- Less running noise

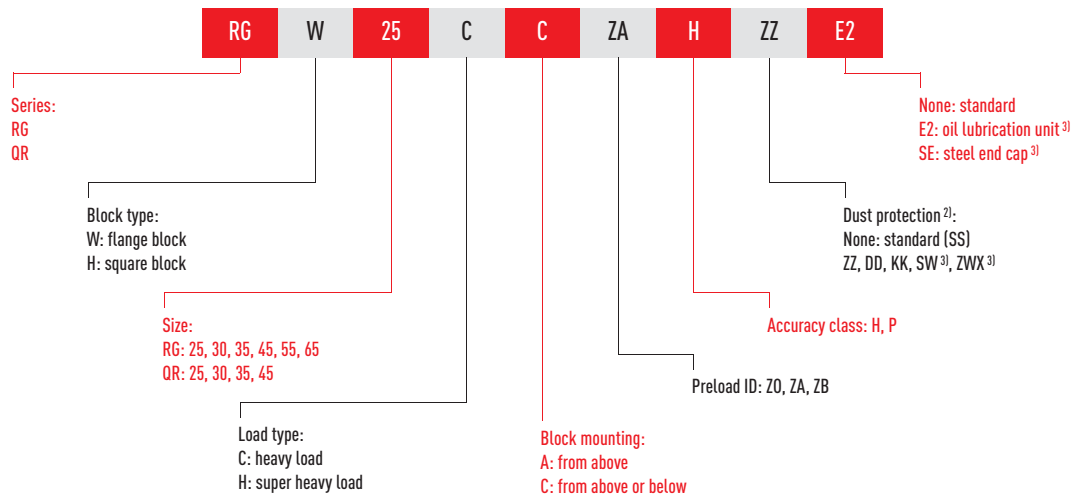

1.7.4.1 Non-interchangeable models (custom-assembled)

○ Article number of the fully assembled linear guideway

1.7.4.2 Interchangeable models

○ Article number of RG/QR block

○ Article number of RG rail

Note:

¹⁾ The figure 2 is also a quantity, i.e. one item of the above-mentioned article consists of a pair of rails. No number is specified for individual rails.

²⁾ You will find an overview of the individual sealing systems on page 89.

³⁾ Only available for RG

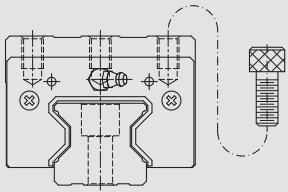

Linear Guideways

RG/QR series

1.7.5 Block types

HIWIN provides square and flange blocks for the linear guideways. Given their low height and large mounting surface, flange blocks are suited to large loads.

Table 1.104 Block types

Type	Series/ size	Structure	Height [mm]	Rail length [mm]	Typical application
Square type	RGH-CA RGH-HA		40 – 90	100 – 4.000	<ul style="list-style-type: none"> ○ Automation technology ○ Transport technology ○ CNC machining centers ○ High-performance cutting machines ○ CNC grinding machines ○ Injection moulding machines ○ Portal milling machines ○ Machines and systems requiring high rigidity ○ Machines and systems requiring high load rating ○ Spark erosion machines

1.7.6 Preload

1.7.6.1 Definition

Every rail type can be preloaded. Oversized rollers are used for this purpose. Normally a linear guideway has negative clearance between track and rollers to increase rigidity and precision. The linear guideways of the RG/QR series offer three standard preloads for various applications and conditions.

1.7.6.2 Preload ID

Table 1.105 Preload ID

ID	Preload		Application
Z0	Light preload	0,02 – 0,04 C_{dyn}	Constant load direction, little impact, low precision required
ZA	Medium preload	0,07 – 0,09 C_{dyn}	High precision needed
ZB	High preload	0,12 – 0,14 C_{dyn}	Very high rigidity required, with vibration and impact

Note:

Preload classes for interchangeable guides Z0, ZA. For non-interchangeable guides Z0, ZA, ZB.

The diagram shows the relationship between rigidity, frictional resistance and nominal lifetime. For smaller models, a preload of no more than ZA is recommended to avoid the lifetime being shortened as a result of preload.

1.7.7 Load ratings and torques

Linear Guideways

RG/QR series

1.7.8 Rigidity

Rigidity depends on preload. The adjacent formula can be used to determine deformation depending on rigidity.

$$\delta = \frac{P}{k}$$

δ : Deformation [μm]

P: Operating load [N]

k: Rigidity [N/ μm]

Table 1.107 Radial rigidity for series RG/QR

1.7.10.2 Dimensions RGR_T (rail mounting from below)

Table 1.111 Dimensions of rail RGR_T

Series/ size	Dimensions of rail [mm]					Max. length [mm]	Max. length $E_1 = E_2$	$E_{1/2}$ min [mm]	$E_{1/2}$ max [mm]	Weight [kg/m]
	W_R	H_R	S	h	P					
RGR25T	23	23,6	M6	12,0	30,0	4000	3960	8	22	3,36
RGR30T	28	28,0	M8	15,0	40,0	4000	3920	9	31	4,82
RGR35T	34	30,2	M8	17,0	40,0	4000	3920	9	31	6,48
RGR45T	45	38,0	M12	24,0	52,5	4000	3937,5	12	40,5	10,83
RGR55T	53	44,0	M14	24,0	60,0	4000	3900	14	46	15,15
RGR65T	63	53,0	M20	30,0	75,0	4000	3900	15	60	21,24

- Note:
1. The tolerance for E is $+0.5$ to -1 mm for standard rails and 0 to -0.3 mm for joints.
 2. If the $E_{1/2}$ dimensions are not indicated, the maximum possible number of mounting holes will be determined under consideration of $E_{1/2}$ min.
 3. The rails are shortened to the required length. If the $E_{1/2}$ dimensions are not indicated, these will be carried out symmetrically

Linear Guideways

RG/QR series

1.7.10.3 Calculating the length of rails

HIWIN offers rails in customized lengths. To prevent the risk of the end of the rail becoming unstable, the value E must not exceed half of the distance between the mounting holes (P). At the same time, the value $E_{1/2}$ should be between $E_{1/2}$ min and $E_{1/2}$ max so that the mounting hole does not rupture.

$$L = (n - 1) \cdot P + E_1 + E_2$$

- L: Total length of the rail [mm]
- n: Number of mounting holes
- P: Distance between two mounting holes [mm]
- $E_{1/2}$: Distance from the middle of the last mounting hole to the end of the rail [mm]

1.7.10.4 Tightening torques for mounting bolts

Insufficient tightening of the mounting bolts strongly compromises the precision of the linear guideway. The following tightening torques are recommended for the relevant screw sizes.

Table 1.113 Tightening torques of the mounting bolts according to ISO 4762-12.9

Series/size	Screw size	Torque [Nm]	Series/size	Screw size	Torque [Nm]
RG_25	M6 × 20	14	RG_45	M12 × 35	120
RG_30	M8 × 25	31	RG_55	M14 × 45	160
RG_35	M8 × 25	31	RG_65	M16 × 50	200

1.7.10.5 Cover caps for mounting holes of rails

The cover caps are used to keep the mounting holes free of chips and dirt. The standard plastic caps are provided with each rail. Optional cover caps must be ordered separately.

Table 1.114 Cover caps for mounting holes of rails

Rail	Screw	Article number			Ø D [mm]	Height H [mm]
		Plastic	Brass	Steel

Unit: mm

1.7.11.1 Designation of seal sets

The sealing sets are always supplied along with the assembly material and include the parts needed in addition to the standard seal.

Linear Guideways

RG/QR series

1.7.11.2 Friction

The table shows the maximum frictional resistance of the individual end seal. Depending on sealing setup (SS, ZZ, DD, KK), the value may have to be multiplied. The values indicated apply to blocks on uncoated rails. Higher friction forces occur on coated rails.

Table 1.117 Frictional resistance of the single-lipped seals

Series/size	Friction force [N]	Series/size	Friction force [N]
RG/QR_25	2,8	RG/QR_45	4,2
RG/QR_30	3,3	RG_55	5,1
RG/QR_35	3,5	RG_65	6,7

1.7.12 Tolerances depending on accuracy class

The RG and QR series are available in four accuracy classes depending on parallelism between block and rail, height accuracy H and accuracy of width N. The choice of accuracy class is determined by the machine requirements.

1.7.12.1 Parallelism

Parallelism of stop surfaces D and B of block and rail and parallelism of top of block C to mounting surface A of rail. Ideal linear guideway installation is required, as is a measurement in the centre of the block.

Table 1.118 Tolerance of parallelism between block and rail

Rail length [mm]	Accuracy class			
	H	P	SP	UP
- 100	7	3	2	2
100 - 200	9	4	2	2
200 - 300	10	5	3	2
300 - 500	12	6	3	2
500 - 700	13	7	4	2
700 - 900	15	8	5	3
900 - 1100	16	9	6	3
1100 - 1500	18	11	7	4
1500 - 1900	20	13	8	4
1900 - 2500	22	15	10	5
2500 - 3100	25	18	11	6
3100 - 3600	27	20	14	7
3600 - 4000	28	21	15	7

Unit: μm

1.7.12.2 Accuracy – height and width

Height tolerance H

Permissible absolute dimension variance of height H, measured between centre of screw-on surface C and underside of rail A, with block in any position on the rail.

Width tolerance N

Permissible absolute dimension variance of width N, measured between centre of screw-on surfaces D and B, with block in any position on the rail.

Height variance of H

Permissible variance of height H between several blocks on a rail, measured in the same rail position.

Width variance of N

Permissible variance of width N between several blocks on a rail, measured in the same rail position.

Table 1.119 Height and width tolerances of non-interchangeable models

Series/size	Accuracy class	Height tolerance of H	Width tolerance of N	Height variance of H	Width variance of N
RG_25, 30, 35 QR_25, 30, 35	High (H)	± 0,04	± 0,04	0,015	0,015
	Precision (P)	0 – 0,04	0 – 0,04	0,007	0,007

Unit: mm

Linear Guideways

RG/QR series

1.7.13 Permissible mounting surface tolerances

Once the requirements relating to the accuracy of the mounting surfaces are met, the good accuracy, rigidity and lifetime of the RG and QR series linear guideways are achieved.

- Tolerance for the parallelism of the reference surface (P)

Table 1.121 Maximum tolerance for parallelism (P)

Series/size	Preload class		
	Z0	ZA	ZB
RG/QR_25	9	7	5
RG/QR_30	11	8	6
RG/QR_35	14	10	7
RG/QR_45	17	13	9
RG_55	21	14	11
RG_65	27	18	14

Unit: μm

- Tolerance for the height of the reference surface (S_1)

$$S_1 = a \times K$$

S_1 : Max. height tolerance
 a : Distance between rails
 K : Coefficient of the height tolerance

Table 1.122 Coefficient of height tolerance (K)

Series/size	Preload class		
	Z0	ZA	ZB
RG_25 – 65/QR_25 – 45	$2,2 \times 10^{-4}$	$1,7 \times 10^{-4}$	$1,2 \times 10^{-4}$

Height tolerance of the block mounting surface

- The height tolerance of the reference surface in the parallel use of two or more blocks (S_2)

$$S_2 = b \times 4.2 \times 10^{-5}$$

S_2 : Max. height tolerance
 b : Distance between blocks

- The height tolerance of the reference surface in the parallel use of two or more blocks (S_3)

$$S_3 = c \times 4.2 \times 10^{-5}$$

S_3 : Max. height tolerance
 c : Distance between blocks

1.7.14 Shoulder heights and fillets

Imprecise shoulder heights and fillets of mounting surfaces compromise precision and may lead to conflicts with the block or rail profiles. The following shoulder heights and edge profiles must be observed in order to avoid assembly problems.

Table 1.123 Shoulder heights and fillets

Series/size	Max. edge radius r_1	Max. edge radius r_2	Shoulder height of reference edge of rail E_1	Shoulder height of reference edge of block E_2	Clearance under block H_1
RG/QR_25	1,0	1,0	5,0	5,0	5,5
RG/QR_30	1,0	1,0	5,0	5,0	6,0
RG/QR_35	1,0	1,0	6,0	6,0	6,5
RG/QR_45	1,0	1,0	7,0	8,0	8,0
RG/QR_55	1,5	1,5	9,0	10,0	10,0
RG/QR_65	1,5	1,5	10,0	10,0	12,0

Unit: mm

Linear Guideways

Accessories

1.8 Accessories

1.8.1 Lubrication adapters

A grease nipple is attached to one end of the block as standard. It can also be fitted on the side of the block. If fitted on the side, the grease nipple should not be fitted on the reference side. Lubrication can also be via a lubrication line connection.

Table 1.124 Grease nipples

The stated article numbers apply to the standard dust protection. Article numbers for optional dust protection available on request.

1.8.2 Sealing systems SS, ZZ, DD, KK

The HIWIN end seals firstly prevent the ingress of foreign substances such as dust particles, chips or liquid into the block's ball tracks and secondly reduce the amount of lubricant lost. HIWIN provides various sealing systems for the various ambient condi-

tions of your application. The effectiveness of the end seal impacts directly on the lifetime of the linear guideway and should therefore be taken into account at the design stage and selected to suit the ambient conditions of your application.

SS (standard):

End seal with bottom seal

- For applications with little dirt and dust
- Only minimal increase in displacement forces

ZZ:

End seal with bottom seal and scraper

- For applications associated with hot chips or sharp-edged particles of dirt
- The scraper protects the end seal and prevents it from being damaged

DD:

Double end seal with bottom seal

- For applications associated with a lot of dirt and dust
- The double end seal effectively prevents the ingress of dirt into the block

KK:

Double end seal with bottom seal and scraper

- For applications associated with a lot of dirt and dust and hot chips or sharp-edged particles of dirt
- The scraper protects the end seals and prevents them from being damaged

Availability of sealing systems SS, ZZ, DD and KK:

Sealing systems SS, ZZ, DD and KK are available for all series and sizes.

The exceptions are the MG and PM series, for which only the standard sealing system SS is available.

Linear Guideways

Accessories

1.8.3 Sealing systems SW and ZWX for optimum dust protection

Sealing systems SW and ZWX allow HIWIN linear guideways to also be used in areas with very high levels of dirt. The sealing systems offer optimum protection against

Properties:

- End seal with double sealing lip
- Optimized bottom seal
- Additional top seal
- Optimized stainless steel scraper

SW:

End seal with double sealing lip, optimized bottom seal and additional top seal

- Optimum dust protection
- The additional top seal prevents the ingress of dirt via the top of the rail
- The optimized bottom seal protects against the ingress of dirt on the rail flank

ZWX:

End seal with double sealing lip, optimized bottom seal, additional top seal and optimized scraper

- Optimum dust protection
- The additional top seal prevents the ingress of dirt via the top of the rail
- The optimized bottom seal protects against the ingress of dirt on the rail flank
- The optimized scraper also protects against dirt particles > 0.2 mm in diameter and prevents damage to the end seal.

the ingress of dirt, dust and liquid. The end seal is resistant to oils and greases and very resistant to wear.

Advantages:

- Optimum dust protection
- Lifetime extended ten-fold
- Longer lubrication intervals
- Lower maintenance costs

Dust test for sealing systems SW and ZWX

Thorough dust tests have shown that the lifetime with sealing systems SW and ZWX is ten times longer than that with a standard seal in cases of high dust levels.

Test conditions:

- Sealed room in which MDF dust is swirled about
- $v = 1.3 \text{ m/s}$
- Grease lubrication

- Sealing system SW, ○ sealing system SW (without top seal and optimized bottom seal)
- Sealing system ZWX, □ sealing system ZWX (without top seal and optimized bottom seal)

2. Ballscrews

Ballscrews consist of a ballscrew shaft, a ballscrew nut into which the balls are integrated and the ball recirculation system. HIWIN ballscrews are distinguished by their low-friction and precise running, require little drive torque and offer good rigidity with smooth operation. HIWIN ballscrews are available in rolled, peeled and ground versions, making them the optimum product for any application. HIWIN has at its disposal state-of-the-art production facilities, highly qualified engineers and quality-assured manufacturing and assembly and only uses high-grade materials to meet all your requirements.

2.1 Product Overview

Rolled Ballscrews

Page 94

- Nut dimensions according to DIN 69051 Part 5
- Minimal axial backlash or free of play
- Nominal diameter 8 – 63 mm
- Standardized shaft ends

Peeled Ballscrews

Page 98

- Flange and cylindrical nuts
- Single and double nuts
- Nominal diameter 16 – 80 mm
- Standardized shaft ends

Accessories

Page 106

- Standard shaft ends
- Standard bearings
- Nut housing

Ballscrews

Product Overview

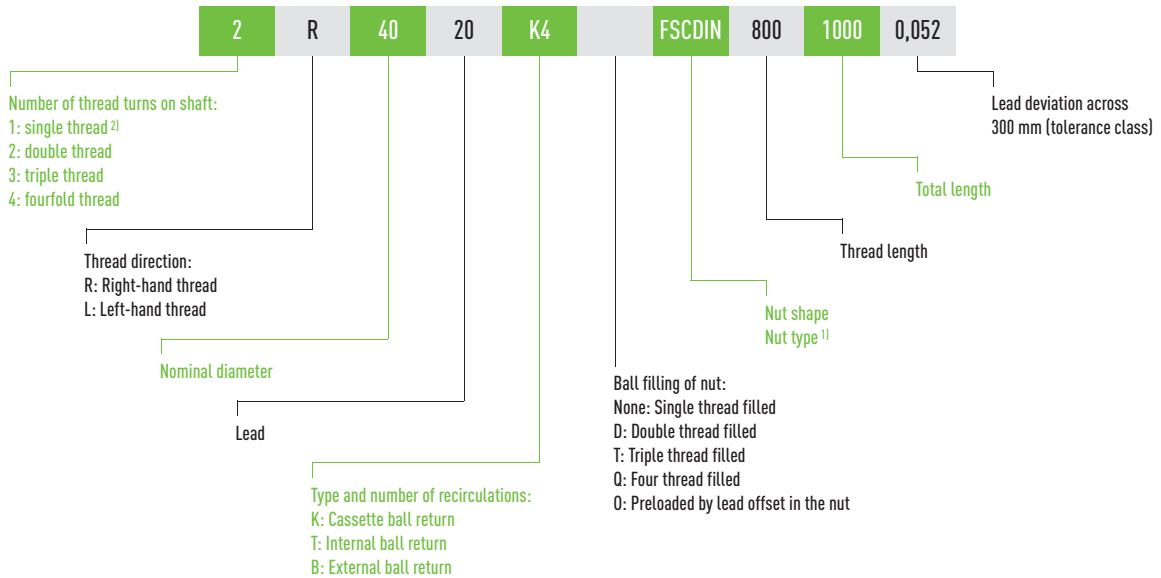

2.1.2 HIWIN ballscrews

HIWIN manufactures ballscrews in line with customer drawings or with HIWIN standard end machining. The following points must be defined and/or checked for the ballscrew definition. This ensures that the ballscrew is ideally adapted to the requirements in place.

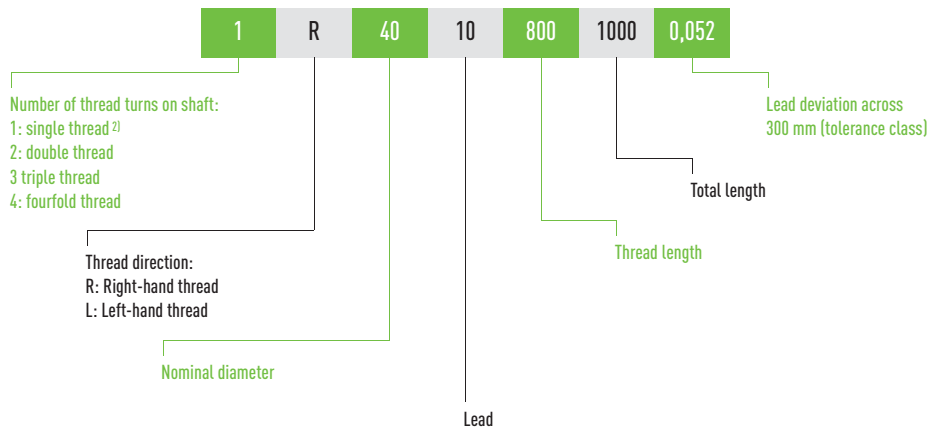

1. Nominal diameter
2. Thread lead
3. Thread total length
4. End journal configuration
5. Ballscrew nut configuration
6. Accuracy grade (lead deviation, tolerances)
7. Operating speed
8. Maximum static load, operating load, preload friction torque
9. Safety requirements of ballscrew nut
10. Position of lubrication holes

2.1.3 HIWIN order code

In order to clearly identify the ballscrew, information about the ballscrew shaft and nut is needed.

2.1.4 Details about the ballscrew shaft without the nut

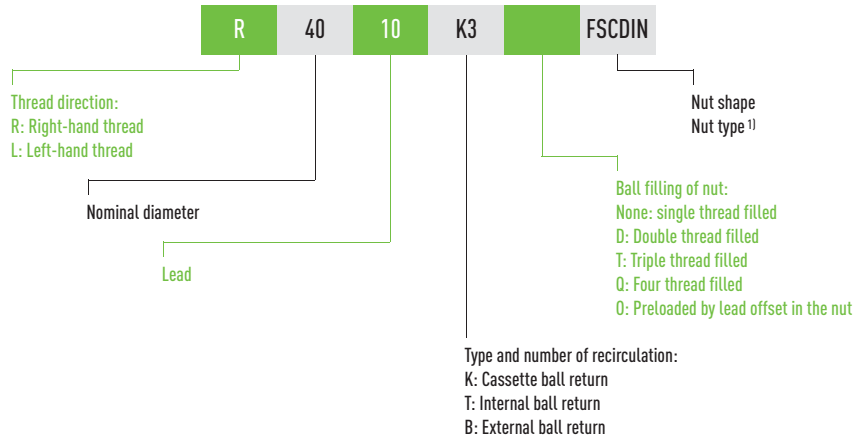

¹⁾ see table 2.1

²⁾ Standard – can be omitted with single-thread shafts

2.1.5 Details about the ballscrew nut without the shaft

The nut designations vary depending on whether a rolled, peeled or ground ballscrew is used.

Details of the ballscrew nut:

¹⁾ see Table 2.1

Table 2.1 Overview of nut designs

Nut designation	Description
DEB	Flange single nut according to DIN69051, Part 5 for peeled ballscrew shafts
DDB	Flange double nut according to DIN69051, Part 5 for peeled ballscrew shafts
FSIDIN FSCDIN	Flange single nut according to DIN69051, Part 5 for rolled and ground ballscrew shafts. The "DIN" addition is not used for customised flange nuts which do not correspond to DIN
RSI	Cylindrical single nut for rolled and ground ballscrew shafts
RSIT	Cylindrical single nut with screw-in thread for rolled ballscrew shafts
SE	Cylindrical single nut with screw-in thread for peeled ballscrew shafts
SEM	Flange single nut with integrated locking nut for peeled ballscrew shafts
ZE	Cylindrical single nut for peeled ballscrew shafts
ZD	Cylindrical double nut for peeled ballscrew shafts
FSV	Nut with reinforced recirculation system for heavy-duty operation

Ballscrews

Rolled Ballscrews

2.2 Rolled Ballscrews

2.2.1 Properties

One of the benefits of rolled ballscrews is that feed systems equipped with them have less friction and are quieter than standard threads.

HIWIN manufactures them using state-of-the-art rolling technologies where the processes of material selection, rolling, heat treatment, machining and assembly are very closely coordinated.

Rolled ballscrews from HIWIN can be flexibly used in virtually all areas of industry. Rolled ballscrew shafts with diameters of 8 mm to 63 mm are always kept in stock and can be supplied at short notice. They can be supplied with or without end machining. Complete bearing units combined with standardised shaft ends enable us to supply complete ballscrews.

2.2.2 Tolerance classes

Table 2.2 shows the tolerance classes of rolled ballscrews. The lead accuracy is defined using the deviation from nominal path over any 300 mm section of the entire length.

Table 2.2 Tolerance classes of rolled ballscrews

Path deviation	Tolerance class		
	T5	T7	T10
V_{300p}	0,023	0,052	0,21

Unit: mm

Limit deviation e_p $e_p = \pm \frac{L_u}{300} \cdot V_{300p}$ L_u Useful path
 V_{300p} Permissible path deviation over 300 mm travel

2.2.3 Overview of rolled ballscrews available

Table 2.3 Overview of rolled ballscrews available

Nominal diameter	Lead																		Max. spindle length

Unit: mm

- Right-hand and left-hand thread
- Only right-hand thread
- Preferred type for right-hand thread with fast delivery

2.2.4 Nuts for rolled ballscrews

The ballscrews listed below are available ex stock in tolerance class T7 and therefore have a short delivery time.

Nut types deviating from the standard, double nuts for rolled ballscrews and deviating tolerance classes can be ordered and supplied. Contact HIWIN staff for more details.

Ballscrews

Peeled Ballscrews

2.3 Peeled Ballscrews

2.3.1 Properties

In terms of quality, peeled ballscrews from HIWIN fall between rolled and ground ballscrews and can therefore be used for numerous transport or positioning applications. On request, we are happy to produce a lead measurement report for them. A number of nut shapes are available for peeled ballscrews, as both single and double nuts.

Customised complete ballscrews can be produced with short lead times. Complete bearing units combined with standardised shaft ends minimise the amount of design work involved.

2.3.2 Tolerance classes

Table 2.7 shows the tolerance classes of peeled ballscrews. The lead accuracy is defined using the deviation from nominal path over any 300 mm section of the entire length.

Table 2.7 Tolerance classes of peeled ballscrews

Path deviation	Tolerance class	
	T5	T7
V_{300p}	0,023	0,052

Unit: mm

Limit deviation e_p $e_p = \pm \frac{l_u}{300} \cdot V_{300p}$ l_u Useful path
 V_{300p} Permissible path deviation over 300 mm travel

2.3.3 Overview of peeled ballscrews available

Table 2.8 Overview of peeled ballscrews available

Nominal diameter	Lead				Max. spindle length ¹⁾
	5	10	20	40	
16	○□				3300

Ballscrews

Peeled Ballscrews

2.3.9 Safety nut SEM

The safety nut comprises a ball thread unit and safety unit. The safety nut basically works like a normal ballscrew nut. If the axial backlash is increased due to wear, ball failure or ball loss, the thread of the safety unit comes into contact with the ball thread. The nut cannot therefore break out. The normal function of the unit is guaranteed up to an axial backlash of 0.4 mm.

Areas of application:

- Lifting equipment
- Clamping fixtures
- Lifting platforms
- Elevators

Table 2.14 Safety nut dimensions

Simply using a safety nut does not provide sufficient protection against a load being lowered unintentionally. The safety guidelines valid for the application must be observed. Other measures, such as monitoring the motor current and the driveline, should be in place.

- Reduced axial play on request
- Nuts with dirt wipers
- Precision ground ball tracks
- Left-handed nuts on request

---	----	----	----	-----	------	------	-------

2.3.10 Driven nut unit AME

The threaded nut is mounted in an axial angular ball bearing ZKLF...2Z. The less stringent PE version is preferred. The bearing has defined preload using a precision groove nut from the HIR series. The bearing achieves a good resistance to tilting thanks to the O arrangement of the two rows of balls. Any axial and radial forces which arise are absorbed with ease. The thick-walled, dimensionally-stable outer bearing race is screwed directly onto the bearing block.

There is no need for an extra bearing bush or bearing cover. Circulating oil lubrication supplies the bearing with lubricant. The ballscrew nut is lubricated via a radial bore in the shaft. The less stringent axial angular ball bearing can only be lubricated axially. We are happy to develop the right unit for any application, taking due account of different installation circumstances. A wide range of realised applications provides the ideal basis for finding a solution to your problem.

Ballscrews

Accessories

2.4 Accessories

2.4.1 Shaft ends and bearing configuration

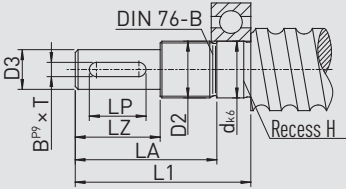

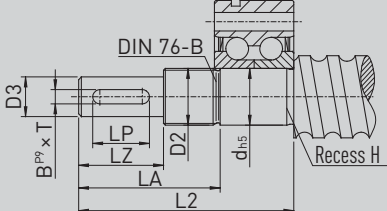

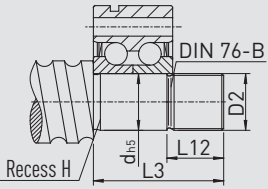

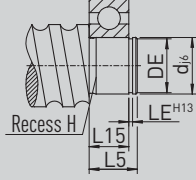

To reduce the amount of design work required, we provide standardised end machining processes and bearing units. We recommend the "B", "E" and "F" bearing series for simple applications and low axial forces. They are suited to all tasks in applications where the ballscrew is not subject to stringent requirements. The SFA and SLA bearing units are suited to more challenging applications. The WBK series is available for heavy-duty applications.

When selecting the suitable bearing type, the permissible axial force of the fixed bearing must also be taken into account.

Types of assembly

The type of installation and mounting of the ballscrew shafts are decisive for rigidity, critical speed and buckling load. This must be given careful consideration when selecting the type of assembly.

Table 2.16 Overview of standard shaft ends for SFA, SLA bearing series

	
<p>Type S1 Bearing: Deep groove ball bearing 60.. or 62.. For SLA bearing unit</p>	<p>Type S2 Bearing: ZKLF.. or ZKLN.. For SFA bearing unit</p>
	
<p>Type S3 Bearing: ZKLF.. or ZKLN.. For SFA bearing unit</p>	<p>Type S5 Bearing: Deep groove ball bearing 62.. For SLA bearing unit</p>

Example:

Designation of shaft end, type S2, with the fit diameter $d = 20$: S2-20.

2.4.2 WBK bearing series

Thanks to their robust steel bearing housing, the flange bearing units of the WBK series are especially suited to use in heavy-duty ballscrews. Depending on the axial loads present, the WBK bearing units are available with the DF, DFD and DFF bearing arrangements. The end machining processes suited to the WBK fixed bearing are types W1, W2 and W3 (page 108).

2.4.3 SFA/SLA bearing series

2.4.3.1 Fixed bearing SFA

The axis height of the fixed bearing is matched to supported bearing SLA (page 114) and nut housing GFD (page 115). The pillow block can be screwed on from above (S1) and below (S2).

The reference edge makes it easier to align the unit. The fixed bearing can be pinned with two tapered pins or cylindrical pins. The end machining suited to the fixed bearing is the S2-xx/S3-xx type (page 106).

2.4.4 Housing for flange nuts (DIN 69051 Part 5)

The nut housing is suitable for assembling flange nuts DEB (page 99), DDB (page 100) and FSCDIN (page 96). The axis height of the housing is matched to fixed bearing SFA (page 112) and the supported bearing SLA (page 114).

The housing can be screwed on from above (S1) and below (S2). The housing can be pinned with two tapered pins or cylindrical pins. Screws of strength class 8.8 should be used for the fastening.

Positioning Systems

KK Linear axes

3. Positioning Systems

3.1 KK Linear axes

3.1.1 Product overview KK linear axes

The HIWIN KK linear axes are compact positioning axes, which are supplied fully mounted with HIWIN servo motor and HIWIN servo drive. Alternatively, the KK linear axis can also be supplied with "motor-ready" mountings for connecting to customer-specific motors. High levels of accuracy and rigidity are achieved through a linear guideway in the steel profile with integrated ballscrew. The axis is available in different sizes and lengths and can be adapted to the relevant application requirements through additional options such as aluminium covers, bellow covers, limit switches and additional blocks.

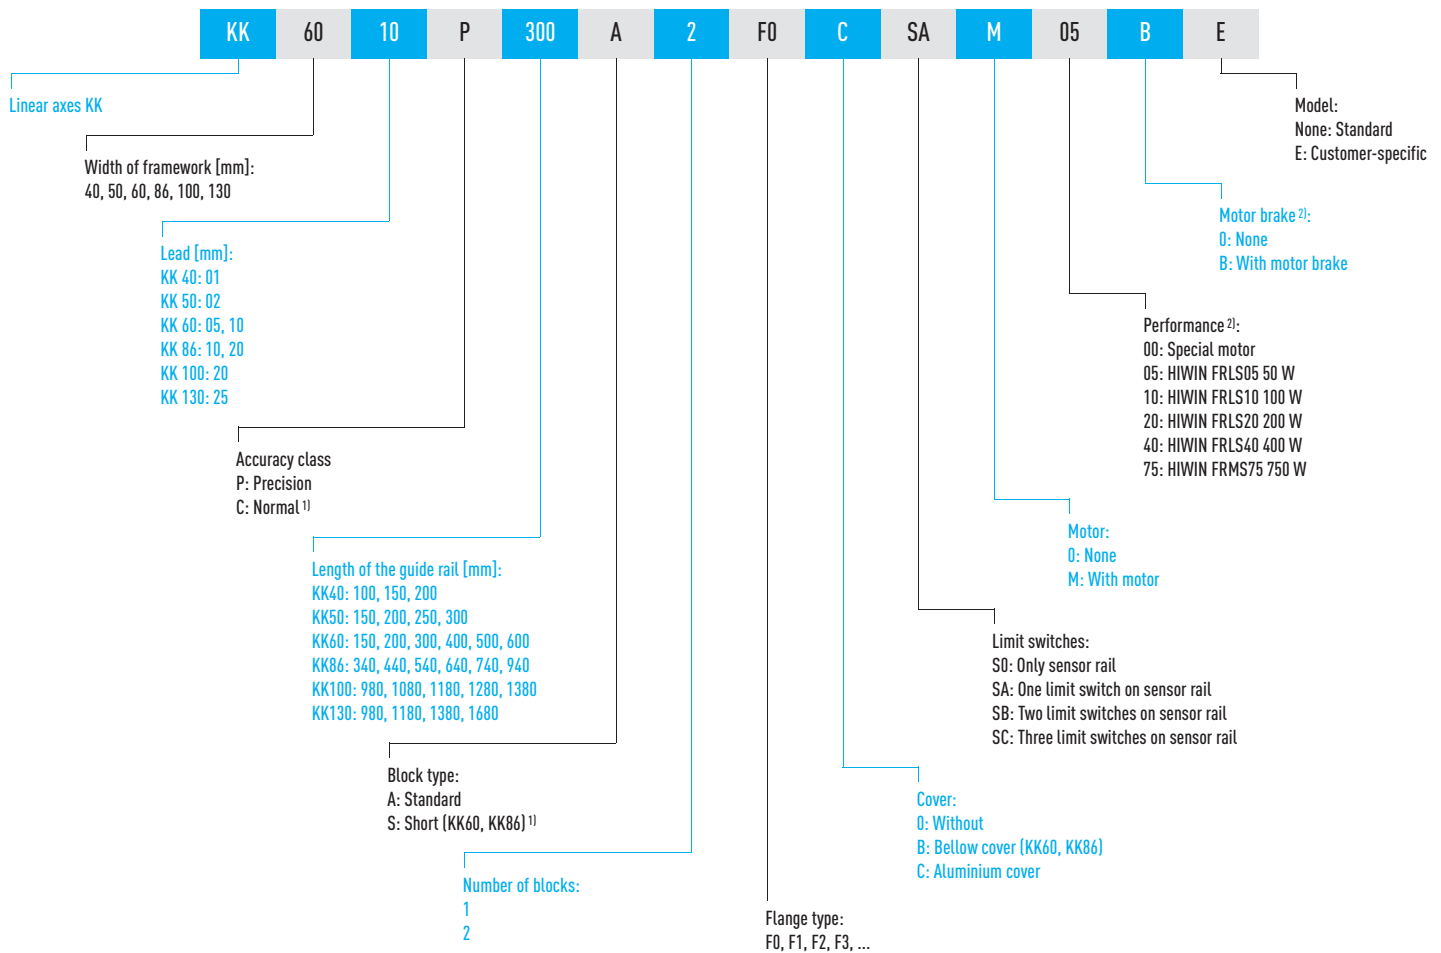

3.1.2 Advantages of KK linear axes

- Ready-to-install complete axis with HIWIN servo motor and HIWIN drive
- Universal use
- Compact design
- Adaptable and robust
- High precision and rigidity

3.1.3 Construction of the linear axes KK

3.1.4 Order key for linear axes KK

¹⁾ On request

²⁾ Not applicable for version without motor

The item numbers of the associated HIWIN servo motors and HIWIN drives and extension cables can be found in tables 3.73 and 3.74.

3.1.29 Accessories for linear axes KK

3.1.29.1 HIWIN servo motor

The HIWIN synchronous AC servo motors are available with outputs of 50 W, 100 W, 200 W, 400 W and 750 W. The standard motors are equipped with a 13-bit encoder with 10 000 increments per revolution, and are available with or without a motor brake as an option.

Table 3.72 Assignment of motor type to KK linear axis

Motor type	Motor performance [W]	Motor torque		KK40	KK50	KK60	KK86	KK100	KK130
		Nominal torque	Peak torque						
FRLS05	50	0,16	0,48	●	●	●			
FRLS10	100	0,32	0,96	●	●	●			
FRLS20	200	0,64	1,92				●	●	●
FRLS40	400	1,27	3,81				●	●	●
FRMS75	750	2,40	7,20					●	●

The motor and encoder cable connections are provided with a connector for the quick and easy connection of extension cables.

Table 3.73 Motor and encoder cable extension

Length	Motor cable length		Encoder cable
	Without brake	With brake	
3 m	8-10-0627	8-10-0623	8-10-0751
5 m	8-10-0628	8-10-0624	8-10-0752
7 m	8-10-0629	8-10-0625	8-10-0753
10 m	8-10-0630	8-10-0626	8-10-0754

For more information about the HIWIN servo motors, please consult the "Electrical drive technology" catalogue or visit www.hiwin.de

3.1.29.2 HIWIN D2 servo drive

The compact HIWIN D2 servo drive is specially optimised for HIWIN servo motors and is available in the performance classes 100 W, 400 W and 1000 W. The D2 drive offers the following properties:

- Fully digital, vector-controlled drive
- Autotuning function
- Vibration suppression
- Error compensation
- Integrated SPS function
- All connections feature connectors for quick exchange
- 2-line alphanumeric display with 4 control keys on the drive
- Digital pulse-direction interface and analogue +/-10 V interface
- Position control, speed control and torque control
- Inputs/outputs which can be parameterised
- Optional Ethercat interface with CoE (CAN over Ethercat) protocol and DS402 drive profile
- Optional mega-ulink interface
- Efficient and freely available "Lightening" commissioning software

Table 3.74 Assignment of D2 servo drive to motor type

Motor		Servo drive				Linear axis KK
Type	Nominal output	Performance class	D2 _{Standard}	D2 _{EtherCAT}	D2 _{mega-ulink}	
FRLS05	50 W	100 W	8-09-0423	8-09-0441	8-09-0445	KK40, KK50, KK60
FRLS10	100 W	100 W	8-09-0423	8-09-0441	8-09-0445	KK40, KK50, KK60
FRLS20	200 W	400 W	8-09-0422	8-09-0442	8-09-0444	KK86, KK100, KK130
FRLS40	400 W	400 W	8-09-0422	8-09-0442	8-09-0444	KK86, KK100, KK130
FRMS75	750 W	1000 W	8-09-0424	8-09-0443	8-09-0446	KK100, KK130

For more information, please consult the assembly and commissioning instructions available at www.hiwin.de. The "Lightening" commissioning software can also be downloaded for free from our website.

3.1.29.3 Sensor rail with limit switch

The KK linear axis can be ordered with up to three limit switches (inductive PNP proximity switches). The limit switches are mounted on the sensor rail where they can be placed in any position. The limit switches are supplied mounted on the sensor rail attached to the linear axis with open cable ends (cable length 4 m). More details of the limit switches can be found in the "KK linear axes assembly instructions" available at www.hiwin.de.

Positioning Systems

KK Linear axes

3.1.29.4 Covers

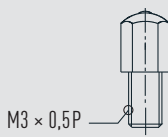

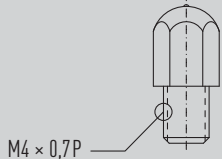

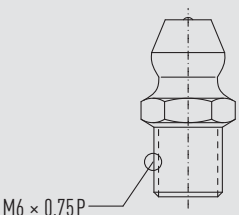

To protect the linear axes, they can be fitted with aluminium or bellows covers. You will find the dimensions of the KK linear axes with covers in the chapters for the relevant sizes.

Table 3.75 Availability of covers

Model	Aluminium cover	Bellow cover
KK40	●	
KK50	●	
KK60	●	●
KK86	●	●
KK100	●	
KK130	●
