Drivon, designed to be used in different types of applications (especially pumps, fans and conveyor belts) consists of extremely reliable components and is controlled by our software that provides excellent performance with special attention to the system energy efficiency. Its Vectorial Control, besides ensuring a constant motor torque throughout a wide range of frequencies without requiring the use of the servo-ventilation at low rpm, provides fast and precise output according to the application dynamic conditions allowing high torque overload of the motor.

Conceived for extremely different and variable supply conditions, Drivon is available both in single-phase/three-phase version ($200 \div 260 \text{ V} / 47 \div 63 \text{ Hz}$) with a motor power between 0.25 and 1.5 kW, and in three-phase version ($360 \div 480 \text{ V} / 47 \div 63 \text{ Hz}$) with a motor power between 0.25 and 5.5 kW. The different functions of this software provide a wide range of standard and optional interfaces for a simple and flexible use. The electronic part, available in 10 power sizes, is located in two different chassis sizes, one for power up to 1.5 kW and the other for power up to 5.5 kW.

The product design considers the following aspects:

- power efficiency;
- modular configuration and expansion possibility;
- potential target markets;
- user-friendly;
- future design development flexibility.

Following these guidelines, Motovario has developed DRIVON, which belongs to the STANDARD segment along with all products of the reference competitors in the AC Induction market.

2.2 INDUSTRY SECTORS

The features of DRIVON enable its application in many industry sectors that require specific performance and functions:

- CONVEYOR BELTS
- PALLETISERS
- PUMPS
- FANS
- SCREW CONVEYORS
- MIXERS
- ROTARY TABLES
- PRESSES
- WINDERS/UNWINDERS
- ELEVATORS (NO ZERO-SPEED)

2.3 INVERTER CHARACTERISTIC

- FOC open-loop control of asynchronous motors
- Input for incremental encoder as speed feedback
- Available according to UL/CSA standards
- Possibility to set parameters through field Bus
- Many functions may be assigned to digital inputs, in particular UP/DOWN function
- Possibility to set the reference frequency

Motovario Drivon inverter motor is the solution to a series of applications present in many industrial environments. Conveyor belts, pumps, fans and other applications in which the decentralised solution is used for reducing the complexity and the overall dimensions of the switchboard and for reaching the performance and efficiency levels required by the market.

REDUCING THE USE OF FORCED-VENTILATION

The perfect integration between Motovario motors and the management software installed inside the Drivon allows to reduce the use of forced-ventilation in the applications that require low rpm. This is due to the optimisation of the software that integrates the motors' characteristics, but also the use of electric motors with IE2 power efficiency levels.

SMART KEYPAD

Thanks to the optional keypad and the parameter copy function, the use of Drivon is more practical and quick during the product set-up phase. This function enables to apply the same parameters to inverter motors with the same configuration. In addition it is possible to start the inverter motor in two directions and display several details on the keypad.

FIRMWARE UPDATE

The firmware update takes place through USB port, accessible by removing a cover located on the inverter case, and a software on PC.

PC SOFTWARE CONFIGURATION

The program grants access to all the inverter parameters for both reading and writing (on-line modification of the inverter parameters) and the relating save operation in a file on the PC. The configuration software also incorporates a digital oscilloscope for tracking the check values.

SAFE TORQUE OFF BUILT-IN SAFETY

The machine directive defines the safety requirements that each machine must comply with in order to be granted the CE marking and enter the market or be manufactured in the European Union countries. In order to do this, all machine operations must have a certain level of safety and be equipped with systems capable of being activated in the event of an emergency, so as to stop the motor and cut off the power supply, until the correct level of safety and the normal operating conditions are restored. To satisfy this safety need, Motovario has integrated in Drivon a Safe Torque Off system that cuts off the motor in case of an emergency, in compliance with ISO 13849-1.

CE

Drivon is an inverter motor with sensorless field orientation speed control that also integrates a V/f control. Drivon is optimised for working at best with the Motovario motors, since the parameters of the motors are integrated in the inverter management software.

Drivon is capable of managing the speed variation, taking advantage of various sources that interact with the inverter motor by means of the built-in or optional I/O. Drivon can receive digital signals that, if properly programmed, can perform various functions, but it can also be controlled thanks to the integrated field bus (Modbus or CANopen) or by means of the optional ones.

Speed variation mode:

- Built-in potentiometer
- Keypad up/down buttons
- Up/down inputs from digital inputs (potentiometer motor)
- Fixed frequency selected from digital input binary combination
- Analogue input (programmable +/-10V or 0-20mA)
- Built-in potentiometer + analogue input algebraic addition
- 0-300KHz frequency input (on optional board)
- Modbus RTU register
- CANopen DSP402

With the programmable digital inputs it is possible to assign different functions to them, among which:

- start/stop
- motion inversion (relative direction control)
- clockwise start (absolute direction control)
- counter-clockwise start (absolute direction control)
- potentiometer motor
- fixed frequency binary combination
- quick emergency stop enable, according to a ramp that may be parametrised
- emergency stop enable at maximum current
- alarm

Drivon can also use the encoder for speed loop feedback through a special connector.

The optional keypad with integrated display provides several details, for example:

- Motor speed (rpm)
- Torque delivered (%)
- Torque current (A)
- Magnetic current (A)
- Reference frequency (Hz)
- Output frequency (Hz)

It is also possible to introduce a scale factor between the measure chosen from the previous list and the one actually displayed on the keypad.

FIELD BUS

Drivon is designed to be used in those applications that need to communicate with the automation world and this is why Motovario designed it with the possibility of relying on the Modbus RTU and CANopen DSP 402 communication protocols. These two field buses are integrated in the software and have special connections.

7.1 VERSIONS

The DRIVON model is available in two different versions, which are distinguished by

- Power supply type
- Power range
- Rated operating speeds

Version	Power supply	Power range	Rated operating speeds
DV123	1ph 230V	0.25 - 1.5 kW	950 rpm
			1450 rpm
DV340	3ph 400V	0.25 - 5.5 kW	950 rpm
			1450 rpm
			1650 rpm
			2450 rpm

The term rated operating speed can be understood as the minimum speed at which the motor-inverter delivers its nominal power with continuity, or rather the maximum speed at which it is able to guarantee its nominal torque with continuity.

In this version, the rated operating speeds G1 and G2 are only available at the power ratings of 0.25 - 1.5 kW.

RATED OPERATING SPEED G1:

Drivon	Supply voltage (ph x V)	Supply current at 230V (A)	Rated output (kW)	Rated operating speed (rpm)	Inverter size	Motor size
DV123-G1-0025S-TS71	1 x 180...260	1.1	0.25	950	S	71
DV123-G1-0037S-TS80	1 x 180...260	1.8	0.37	950	S	80
DV123-G1-0055S-TS80	1 x 180...260	2.5	0.55	950	S	80
DV123-G1-0075S-TH90	1 x 180...260	3	0.75	950	S	90
DV123-G1-0110S-TH100	1 x 180...260	3,9	1.1	950	S	100
DV123-G1-0150S-TH100	1 x 180...260	5,2	1.5	950	S	100

RATED OPERATING SPEED G2:

Drivon	Supply voltage (ph x V)	Supply current at 230V (A)	Rated output (kW)	Rated operating speed (rpm)	Inverter size	Motor size
DV123-G2-0025S-TS71	1 x 180...260	1,1	0.25	1450	S	71
DV123-G2-0037S-TS71	1 x 180...260	1,5	0.37	1450	S	71
DV123-G2-0055S-TS80	1 x 180...260	2	0.55	1450	S	80
DV123-G2-0075S-TH80	1 x 180...260	2,5	0.75	1450	S	80
DV123-G2-0110S-TH90	1 x 180...260	3,5	1.1	1450	S	90
DV123-G2-0150S-TH90	1 x 180...260	4,8	1.5	1450	S	90

7.3 VERSION DV340

This version is available with the rated operating speeds G1, G2, G3 and G4:

RATED OPERATING SPEED G1:

Drivon	Supply voltage (ph x V)	Supply current at 400V (A)	Rated output (kW)	Rated operating speed (rpm)	Inverter size	Motor size
DV340-G1-0025S-TS71	3 x 320...520	0,7	0.25	950	S	71
DV340-G1-0037S-TS80	3 x 320...520	1,2	0.37	950	S	80
DV340-G1-0055S-TS80	3 x 320...520	1,6	0.55	950	S	80

DV340-G4-0520M-TH100	3 x 320...520	10,6	5.2	2450	M	100

8.1 RANGE

Power supply	1ph230V	3ph400V
Power range	0.25 – 1.5 kW	0.25 – 5.5 kW
Motor sizes	71-80-90	90-100-112-132
Inverter sizes	S	S-M
Constant torque speed ranges	50÷950 50÷1450	50÷950 50÷1450 50÷1650 50÷2450
Speed range	0 ÷ 3000 rpm	
Frequency range	0 ÷ 150 Hz	
Frequency resolution	0.01 Hz	
Motor control	Sensorless vectorial, V/f scalar	
Motor starting torque	200% of the rated torque	
100% torque step response	150ms	
Current overload	150% / 60s ; 200% / 3s	
Frequency reference	Integrated potentiometer, analogue input, binary fixed frequency, pulse train, fieldbus, digital Up/Down, keyboard, IP66 potentiometer, multi source (sum)	
Direction selection	Digital inputs, keyboard, fieldbus, IP66 switch (optional)	
Analogue inputs	1 x (-10÷10V) / (0-20mA)	
Digital inputs	4 multifunction (+1 optional)	
Thermal probe inputs	1 x bimetallic (+1 x PTC/PT100 optional)	
Built-in potentiometer	1 with Start/Stop function (+1 optional IP66)	
Encoder input	1 incremental Line Driver (speed loop)	
Analogue outputs	1 x (0-10V) multifunction (optional)	
Digital Outputs	1 multifunction (optional)	
Relay outputs	1 multifunction (+1 optional)	
Serial interfaces	USB	
Integrated field BUS	CANopen 402, Modbus RTU	
Optional field buses	Profibus DPV1, Ethercat	
Optional expansion modules	I/O expansion; EM brake control; Dynamic braking chopper; External IP66 Potentiometer and Direction Selector	
Integrated safety	Safe Torque Off, short circuit, temperature	
On-board power supplies	1x10V, 1x24VDC	
Other Functions	• Parametric V/f curve (V/f control mode) • Parametric S ramps • PI process controller • Jog function • Electronic torque limiter • DC-bus accessible • Integrated multiple dynamic braking • Parameter Copy Keyboard • I/O Expansions (optional) • Braking chopper and resistor (optional) • Synchronised electromechanical brake control (optional) • Configuration software via PC with integrated digital oscilloscope	
Other options	Emergency stop button, quick Power and Signal connectors	
Protection rating	IP55-56-66

Drivon has been designed based on a modular approach so that its standard features can be expanded through appropriate hardware expansions which can be selected upon ordering.

Smart keypad (option KP)

The optional keypad KP provides a control and monitoring interface for user to

- Start the inverter motor in both operating directions with two specific buttons.
- Set the inverter motor parameters by using the menus, easily available thanks to the keypad.
- Copy up to 4 different configuration sets and duplicate them infinitely on Drivon motor-inverters requiring the same operating parameters
- Monitoring motor-inverter state and diagnose its operation
- Operate the motor in JOG mode

The keypad can be used in one of the following modes:

1. Temporary remote connection

User quickly connects the keypad to the inverter through the suitable RJ connector accessible on the cover (IP20 degree of protection).

2. Permanent remote connection

User connects the keypad to the inverter through a cable gland (IP55 degree of protection). The keypad is not mechanically fixed to the inverter.

3. Permanent integrated connection

User connects the keypad electrically and mechanically to the inverter (IP66 degree of protection).

I/O expansion module (options IOA, IOB)

The I/O expansion module provides additional digital and analogue interfaces to supplement standard motor-inverter interfaces. These expansions make the following connections available:

- PT100/NTC/PTC temperature sensor input
- No.1 Auxiliary analogue input $\pm 10V$ or 4-20mA
- No.1 Digital input with frequency up to 100KHz at 24V
- No.1 24V auxiliary digital output
- No.1 Switching relay digital output (max 250V)
- No.1 0-10V analogue output with 500Hz maximum band

The same module comes in two versions – IOA and IOB – with different electric connections to the outside environment:

- IOA: version with cable gland
- IOB: version with two M12 A-code connectors (male connector for Input signals, female connector for Output signals)

Potentiometer and mode selector (option PS)

This supplementary module provides the user with an external Potentiometer and an external Direction Selector (IP66 degree of protection) for manual start and speed selection control.

- Single-turn rotary potentiometer for frequency selection 0....fmax (Hz)
- Three-position direction selector FWD/STOP/REV

Minimum and maximum frequencies, as well as acceleration and deceleration ramps are factory presets. User may make changes to these presets from the KP keypad or via the USB connection to the PC using the Motovario BSi software tool.

Electro-mechanical braking module (option EMB)

The electro-mechanical braking module implements the Operation and Control feature for a self-braking motor equipped with DC brake. This module independently activates and deactivates the brake in perfect sync with motor behaviour through flexible (user-selectable) parameter setting for response timing and speeds. It is available for all Drivon power supply options (1ph230V and 3ph400V). The inverter independently provides the brake coil with the appropriate power supply. User need not carry out any assembly or wiring connections as they are done at the factory.

This option must be requested upon ordering.

Dynamic braking module (chopper) (option BC)

Drivon has a four-segment operating principle. This means it can control the motor even when it is acting as a generator under braking and, generally speaking, when mechanical loading causes the motor to run faster than command speed. Option BC dissipates regenerated energy from the motor to an additional resistor enabling Drivon to brake the load with a power equal to nominal motor power. It consists of a resistive element and an electronic control element, both fixed to the side of the inverter. On self-braking motors, the BC module doubles as EMB module.

Profibus communication module DPV1 (option PDP)

This optional module enables the communication through standard Profibus DPV1 field bus. This module makes it possible to assign a network address through on-board manual rotary selector switches. In addition, the user can activate a termination resistor through jumpers as required. Two M12 B-code connectors (a male and female connector) are provided on the outside of the module for Line connection to field network.

Ethercat communication module (option ETC)

This optional module implements hardware and software interfaces for Real-Time-Ethernet networks over Ethercat profile. Two M12 D-code connectors (a male and a female connector) are provided on the outside of the module for Line connection to field network.

Emergency stop button (option FEM)

This option consists in an external emergency stop button that activates the Drivon's STO function.

Pressing the button cuts power to the motor in full safety in accordance with EN ISO 13849-1 and EN61508, whereas the inverter remains powered.

All the products supplied by the Motovario are exclusively regulated by the general sales terms and conditions available on our website:

<http://www.motovario.com/eng/corporate/sales-conditions>

ATTENTION: Supply information

This catalogue refers to the DRIVON inverter motor, comprising an electric motor and an inverter, both supplied by Motovario. The combination of the single inverter to any electric motor manufactured by other companies does not guarantee the performance values indicated in this catalogue and consequently it does not fall under the Warranty Conditions of Motovario S.p.A.
